## AS BIOLOGY

Paper 2

### Time allowed: 1 hour 30 minutes

#### Materials

For this paper you must have:

- a ruler with millimetre measurements
- a scientific calculator.

#### Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Show all your working.
- Do all rough work in this book. Cross through any work you do not want to be marked.

#### Information

- The marks for the questions are shown in brackets.
- The maximum mark for this paper is 75.

04.1	Give <b>two</b> structures found in all prokaryotic cells and in all eukaryotic cells. [2 marks]	Do not writ outside the box
	1	
	All prokaryotic cells contain a circular DNA molecule and some prokaryotic cells contain plasmids.	
04.2	Scientists have found that the rate of plasmid replication is faster in cells growing in a culture with a high concentration of amino acids than in a culture with a lower concentration of amino acids.	
	Suggest <b>one</b> explanation for the faster rate of plasmid replication in cells growing in a culture with a high amino acid concentration.	
	[2 marks]	

Do not write outside the box

A scientist prepared a culture of a bacterial species.

- She extracted the plasmids and the circular DNA molecules from a sample of cells taken from this culture (**A**).
- She then added antibiotic **X** to the culture and let the cells divide for 4 hours.
- She then extracted the plasmids and the circular DNA molecules from a sample of these cells (**B**).
- The scientist separated the plasmids from the circular DNA molecules in **A** and in **B** using ultracentrifugation.

Figure 6 shows her results.

05.2	What can you conclude about the activity of amylase from the appearance of the surrounding well <b>E</b> and well <b>F</b> in <b>Figure 7</b> ? [2 I	e agar marks]
0 5.3	The student cut out a piece of agar from the clear area surrounding well <b>D</b> . He obtained a solution of the substances contained in this piece of agar.	
	confirm that amylase had affected the starch in the clear area surrounding well I	D. marks]
	Question 5 continues on the next page

The scientist investigated the activity of GOx and HRP enzymes when they are:

- trapped inside cages (**T**) and
- not trapped (NT), but free in solution with **no** cages.

Figure 10 shows his results.

The error bars show  $\pm 2$  standard deviations.

± 2 standard deviations include 95% of the data.
