

## Mark Scheme (Results)

Summer 2022

Pearson Edexcel GCE In Biology B (9BI0/01) Paper 1: Advanced Biochemistry, Microbiology and Genetics

**Edexcel and BTEC Qualifications** 

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <a href="https://www.pearson.com/uk">www.pearson.com/uk</a>

## **General Marking Guidance**

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative respons

| Question | Answer                     | Additional Guidance  | Mark |
|----------|----------------------------|--|------|
| Number   |                            |  |      |
| 1(a)(i)  | • Salmonella (species) (1) | ACCEPT phonetic spellings<br>ACCEPT Shigella, Neisseria, Escherichia,<br>Pseudomonas, Klebsiella, Proteus, Providencia,<br>Escherichia, Morganella, Aeromonas, Citrobacter<br>ACCEPT specific examples e.g. E.coli<br>DO NOT ACCEPT gram positive bacteria e.g.<br>Actinomyces, Clostridium, Mycobacterium,<br>Streptococci, Staphylococci, Nocardia | (1)  |

|                    | Answer   | Additional Guidance  | Mark |
|--------------------|--|--|------|
| Question           |  |  |      |
| Number<br>1(a)(ii) |  | ACCEPT converse for gram positive bacteria   |      |
|                    | <ul> <li>gram negative bacteria have {a thinner peptidoglycan cell wall /<br/>an (outer) lipopolysaccharide (layer) / an outer membrane } (1)</li> </ul> | ACCEPT less peptidoglycan<br>murein for peptidoglycan<br>larger periplasm (space)<br>no teichoic acid (in cell wall) | (1)  |

| Question<br>Number | Answer                                     | Additional Guidance | Mark |
|--------------------|--|---------------------|------|
| 1(b)(i)            | <ul> <li>0.308 / 0.31 / 0.3 (1)</li> </ul> |                     | (1)  |

| Question<br>Number | Answer  | Additional Guidance | Mark |
|--------------------|---|---------------------|------|
| 1(b)(ii)           | <ul> <li>An answer that makes reference to two of the following:</li> <li>endotoxins released from Gram negative bacteria (only) but exotoxins released from both Gram negative and Gram positive bacteria (1)</li> <li>endotoxins are lipopolysaccharides but exotoxins are proteins (1)</li> <li>endotoxins released from {dead / broken down} bacteria but exotoxins are released from living bacteria (1)</li> <li>effect of endotoxins is later (1)</li> </ul> |                     | (2)  |

| Question<br>Number | Answer  | Additional Guidance   | Mark |
|--------------------|---|---|------|
| 2(a)               | An explanation that makes reference to two of the following:  |   |      |
|                    | • meiosis results in recombination of alleles (1)   |   |      |
|                    | • due to {independent / random} assortment (of chromosomes) (1)   | <b>ACCEPT</b> description e.g. pairs of homologous chromosomes line up (on the equator) randomly                        |      |
|                    | <ul> <li>(and) due to crossing over between chromatids (between the<br/>same homologous chromosomes) (1)</li> </ul> | <b>ACCEPT</b> description e.g. genetic material is swapped between chromatids (between the same homologous chromosomes) | (2)  |
|                    |   | DO NOT ACCEPT wrong description/ wrong stage  |      |

| Question<br>Number | Answer  | Additional Guidance  | Mark |
|--------------------|---|--|------|
| 2(b)               | <ul> <li>A description that makes reference to three of the following:</li> <li>(contact between sperm and secondary oocyte results in)<br/><u>acrosome</u> reaction (1)</li> </ul> | ACCEPT ovum / egg cell / female gamete<br>description e.g. enzymes are released from                                       |      |
|                    | • meiosis is completed (1)  | the <u>acrosome</u><br><b>DO NOT ACCEPT</b> if described after cortical reaction<br>or fusion of two cells                 |      |
|                    | • <u>cortical</u> reaction takes place (1)  | ACCEPT description e.g. <u>cortical</u> granules are released that {hardens the membrane / forms a fertilisation membrane} | (3)  |
|                    | <ul> <li>fusion of sperm {nucleus / genetic material} with {nucleus genetic<br/>material}_of ovum (1)</li> </ul>  | ACCEPT egg cell / nuclei of the gametes  | (3)  |

| Question<br>Number | Answer   | Additional Guidance | Mark |
|--------------------|--|---------------------|------|
| 3(a)               | The only correct answer is A   |                     |      |
|                    | <b>B</b> is incorrect because <i>Plasmodium</i> is the genus name not the species name |                     |      |
|                    | <b>C</b> is incorrect because <i>Plasmodium</i> causes malaria not <i>Puccinia</i>     |                     |      |
|                    | D is incorrect because Plasmodium causes malaria not Puccinia                          |                     | (1)  |

| Question<br>Number | Answer   | Additional Guidance  | Mark |
|--------------------|--|--|------|
| 3(b)               | A description that makes reference to three of the following:  |  |      |
|                    | <ul> <li>{gene / DNA / genetic material} coding for toxin isolated (from the spiders) (1)</li> </ul> | <b>ACCEPT</b> mRNA isolated and used to synthesise the gene / base sequence of gene determined and used to synthesise a gene |      |
|                    | <ul> <li>using {restriction enzymes / (restriction) endonucleases} (1)</li> </ul>                    | ACCEPT in context of vector DNA  |      |
|                    | <ul> <li>(spider) gene inserted into fungus using a {vector / named vector}</li> <li>(1)</li> </ul>  | e.g. virus / plasmid / gene gun / injection  | (3)  |
|                    | <ul> <li>genetically-modified fungi {identified / cloned / cultured} (1)</li> </ul>                  | ACCEPT replicate / reproduce   |      |

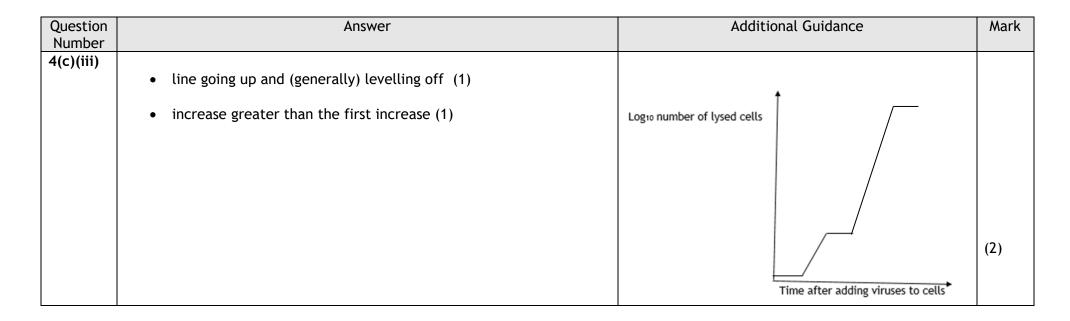

| Question<br>Number | Answer   | Additional Guidance  | Mark |
|--------------------|--|--|------|
| 3(c)               | An explanation that makes reference to three of the following:   | ACCEPT converse for other approach   |      |
|                    | <ul> <li>not unethical as mosquitoes not killed (1)</li> </ul>   | e.g. toxins could harm other organisms, transfer                                     |      |
|                    | <ul> <li>risk of other organisms being affected by the genetically-modified<br/>fungus is avoided (1)</li> </ul> | of genes into other organisms<br>ACCEPT unknown risks                                |      |
|                    | <ul> <li>organisms that feed on mosquitoes will not lose their food supply (1)</li> </ul>                        | ACCEPT biodiversity maintained / ecosystems not disrupted / food chain not disrupted |      |
|                    | <ul> <li>some people believe that modifying DNA is {wrong / unethical} (1)</li> </ul>                            |  | (3)  |
|                    |  |  |      |

| Question<br>Number | Answer   | Additional Guidance | Mark |
|--------------------|--|---------------------|------|
| 4(a)               | The only correct answer is A<br>B is incorrect because the capsid is complex not helical<br>C is incorrect because DNA is the genetic material not RNA<br>D is incorrect because DNA is the genetic material not RNA |                     | (1)  |

| Question | Answer   | Additional Guidance  | Mark |
|----------|--|--|------|
| Number   |  |  |      |
| 4(b)     |  |  |      |
|          | <ul> <li>drawing length of bacteria given in μm or nm / drawing length of virus given in μm or nm</li> <li>OR</li> </ul> | ACCEPT between 95 000 μm / 95 000 000 nm<br>and 115 000 μm / 115 000 000 nm for bacteria<br>between 7 000 μm / 7 000 000 nm and<br>8 000 μm / 8 000 000 nm for virus |      |
|          | <ul> <li>ratio of drawing length (1)</li> </ul>  | ACCEPT between 95 mm and 115 mm for bacteria and between 7 mm and 8 mm for virus   | (2)  |
|          | <ul> <li>actual length of virus given in nm, to the nearest whole number,<br/>value between 103 and 143 (1)</li> </ul>   | ecf if numerals correct but order of magnitude wrong   | (-)  |

| Question<br>Number | Answer   | Additional Guidance  | Mark |
|--------------------|--|--|------|
| 4(c)(i)            | An explanation that makes reference to three of the following:   |  |      |
|                    | <ul> <li>virus to attach to host cells / {genetic material / DNA} to enter<br/>host cells (1)</li> </ul> | ACCEPT virus {enters / infects}<br>DO NOT ACCEPT RNA   |      |
|                    | • synthesis of DNA (1)   | <b>DO NOT ACCEPT</b> RNA unless already penalised in mp 1 / in the context of {proviruses / latency}   |      |
|                    | • {protein synthesis / transcription <u>and translation</u> } (1)  | ACCEPT capsid / capsomeres / tail / base plate /<br>tail (fibres) / collar / J protein / enzymes /<br>protease / permease / other named proteins will<br>need to be checked<br>DO NOT ACCEPT reverse transcriptase / integrase |      |
|                    | • assembly of new viruses (1)  | NB ACCEPT (time for) {replication /<br>multiplication} of the virus in correct context if no<br>other marks awarded.   | (3)  |

|          | Answer   | Additional Guidance  | Mark |
|----------|--|--|------|
| Question |  |  |      |
| Number   |  |  |      |
| 4(c)(ii) |  |  |      |
|          | • correct values read from graph and divided by the time (1) | 3.8 and 1.7 and a division by 40   |      |
|          | • mean rate calculated (1)                                   | 156  |      |
|          |  | ecf wrong time value but correct answer to whole number e.g. (30 mins) 209 | (2)  |
|          |  | Correct answer only = 2 marks  |      |

| Question<br>Number | Answer   | Additional Guidance | Mark |
|--------------------|--|---------------------|------|
| 5(a)(i)            | The only correct answer is A   |                     |      |
|                    | <ul> <li>B is incorrect because light-dependent stage takes place on thylakoid membrane and not in the stroma</li> <li>C is incorrect because light-dependent stage takes place on thylakoid membrane and not on the inner membrane</li> </ul> |                     |      |
|                    | <b>D</b> is incorrect because light-dependent stage takes place on thylakoid membrane and not on the outer membrane  |                     | (1)  |

| Question<br>Number | Answer   | Additional Guidance | Mark |
|--------------------|--|---------------------|------|
| 5(a)(ii)           | The only correct answer is A   |                     |      |
|                    | <b>B</b> is incorrect because hydrogen ions accumulate inside the thylakoids<br>and not in the starch grain<br><b>C</b> is incorrect because hydrogen ions accumulate inside the thylakoids<br>and not in the DNA loop |                     |      |
|                    | <b>D</b> is incorrect because hydrogen ions accumulate inside the thylakoids and not in the inner membrane space   |                     | (1)  |

| Question<br>Number | Answer   | Additional Guidance | Mark |
|--------------------|--|---------------------|------|
| 5(a)(iii)          | The only correct answer is D   |                     |      |
|                    | <ul> <li>A is incorrect because translation occurs on the ribosomes and not inside the thylakoids</li> <li>B is incorrect because translation occurs on the ribosomes and not in the standard provide</li> </ul> |                     |      |
|                    | starch grain <b>C</b> is incorrect because translation occurs on the ribosomes and not in the DNA loop   |                     | (1)  |

| Question<br>Number | Answer   | Additional Guidance | Mark |
|--------------------|--|---------------------|------|
| 5(b)(i)            | The only correct answer is C<br>A is incorrect because per area is m <sup>-2</sup><br>B is incorrect because per area is m <sup>-2</sup> and per second is sec <sup>-1</sup><br>C is incorrect because per second is sec <sup>-1</sup> |                     | (1)  |

| Question<br>Number | Answer  | Additional Guidance                     | Mark |
|--------------------|---|---|------|
| 5(b)(ii)           | An answer that makes reference to three of the following:   | ACCEPT converse throughout              |      |
|                    | <ul> <li>as temperature increases so does rate of photosynthesis (1)</li> </ul>                                     |   |      |
|                    | <ul> <li>rate of photosynthesis is faster in high levels of carbon dioxide (1)</li> </ul>                           |   |      |
|                    | <ul> <li>the optimum temperature for photosynthesis is higher in higher<br/>levels of carbon dioxide (1)</li> </ul> |   | (3)  |
|                    | <ul> <li>optimum for photosynthesis are high levels of carbon dioxide and a<br/>temperature of 37°C (1)</li> </ul>  | ACCEPT temp value between 35.5 and 36.5 |      |

| Question<br>Number | Answer  | Additional Guidance  | Mark |
|--------------------|---|--|------|
| 5(b)(iii)          | An explanation that makes reference to four of the following:   | ACCEPT converse throughout                                       |      |
|                    | <ul> <li>more carbon dioxide and higher temperatures (below optimum)<br/>mean more GALP formed (1)</li> </ul>   | ACCEPT pieced together   |      |
|                    | <ul> <li>higher carbon dioxide concentration means {more carbon dioxide<br/>for / faster} {light-independent stage / Calvin cycle / carbon<br/>fixation} (1)</li> </ul> | <b>ACCEPT</b> description e.g. carbon dioxide reacting with RuBP |      |
|                    | <ul> <li>higher temperatures means that RUBISCO can catalyse carbon<br/>fixation faster (1)</li> </ul>  | <b>ACCEPT</b> temperatures too high, RUBISCO will denature       |      |
|                    | <ul> <li>because more (kinetic / heat) energy so more {enzyme-substrate<br/>complexes / energetic collisions between enzymes and substrates}<br/>(1)</li> </ul>         |  | (4)  |
|                    | • therefore GP formed to be converted into GALP (1)   |  |      |

| Question<br>Number | Answer   | Additional Guidance  | Mark |
|--------------------|--|--|------|
| 6(a)               | <ul><li>A description that makes reference to the following:</li><li>glycerol attached to two fatty acids (by ester bonds) (1)</li></ul> | ACCEPT from a labelled diagram   |      |
|                    | <ul> <li>and one phosphate attached to glycerol (1)</li> </ul>   | NB made from one glycerol two fatty acids and one phosphate = 1 mark if neither mark awarded | (2)  |

| Question<br>Number | Answer  | Additional Guidance            | Mark |
|--------------------|---|--------------------------------|------|
| 6(b)               | An explanation that makes reference to the following:   |                                |      |
|                    | <ul> <li>because the {two polar groups / outside layers} will interact with<br/>the aqueous environment (on each side of membrane) (1)</li> </ul> | ACCEPT form H bonds with water |      |
|                    | <ul> <li>rest of molecule will provide hydrophobic barrier / there will be a<br/>hydrophobic layer (inside) (1)</li> </ul>                        |                                | (2)  |

| Question<br>Number | Answer    | Additional Guidance | Mark |
|--------------------|-----------|---------------------|------|
| 6(c)(i)            |           |                     |      |
|                    | • 1.5 (%) |                     | (1)  |

| Question<br>Number | Answer   | Additional Guidance   | Mark |
|--------------------|--|---|------|
| 6(c)(ii)           | A description that makes reference to two of the following:  |   |      |
|                    | <ul> <li>bacteria with higher optimum growth temperatures have a greater<br/>percentage of branched chain fatty acids (1)</li> </ul> | <b>ACCEPT</b> positive correlation between optimum growth temperature and percentage of branched-chain fatty acids  |      |
|                    | • the greater the percentage of branched chain fatty acids the greater the range of optimum growth temperature (1)                   | converse<br>ACCEPT bacteria with optimum temperature<br>between 20°C and 40°C had the greatest range in<br>percentage of branched-chain fatty acids<br>converse |      |
|                    | <ul> <li>an optimum growth temperature of more than 40°C needs at least<br/>30% of branched chains (1)</li> </ul>                    |   | (2)  |

| Question<br>Number | Answer   | Additional Guidance   | Mark |
|--------------------|--|---|------|
| 6(d)               | An explanation that makes reference to the following:  | ACCEPT converse i.e. what would happen if membrane composition did not change |      |
|                    | <ul> <li>because membranes control {permeability / what can enter and<br/>leave the cell} (1)</li> </ul> | ACCEPT membranes become more {permeable /<br>leaky} at higher temperatures    |      |
|                    | <ul> <li>such as {uptake of nutrients / uptake of oxygen / removal of waste<br/>products} (1)</li> </ul> | ACCEPT named nutrients / waste products                                       |      |
|                    | <ul> <li>because membranes need to be fluid for {movement / cell division}         (1)</li> </ul>        |   | (3)  |

| Question<br>Number | Answer   | Additional Guidance | Mark |
|--------------------|--|---------------------|------|
| 7(a)(i)            | The only correct answer is D   |                     |      |
|                    | A is incorrect because antibodies have two antigen binding sites<br>B is incorrect because the two binding sites attach to the antigen and not<br>the macrophage |                     |      |
|                    | $\mathbf{C}$ is incorrect because there is only one macrophage binding site  |                     | (1)  |

| Question<br>Number | Answer  | Additional Guidance | Mark |
|--------------------|---|---------------------|------|
| 7(a)(ii)           | The only correct answer is B  |                     |      |
|                    | A is incorrect because hydrolysis reactions breakdown molecules<br>C is incorrect because nucleotides are the monomers of polynucleotides<br>not proteins |                     |      |
|                    | D is incorrect because nucleotides are the monomers of polynucleotides not proteins   |                     | (1)  |

| Question<br>Number | Answer   | Additional Guidance  | Mark |
|--------------------|--|--|------|
| 7(a)(iii)          | An explanation that makes reference to the following:  |  |      |
|                    | • (because water enters part of cell) by osmosis (1)   |  |      |
|                    | • from a high water potential to a low water potential / because the osmotic potential inside the cell is lower / from a low solute concentration to a higher solute concentration (1) | ACCEPT more concentrated cytoplasm<br>solute potential for osmotic potential | (2)  |

| Question<br>Number | Answer   | Additional Guidance  | Mark |
|--------------------|--|--|------|
| 7(a)(iv)           | A description that makes reference to three of the following:                                |  |      |
|                    | <ul> <li>bacteria engulfed and {digested / broken down} (1)</li> </ul>                       |  |      |
|                    | <ul> <li>antigen attached to MHC antigen (1)</li> </ul>                                      |  |      |
|                    | <ul> <li>macrophage becomes an antigen-presenting cell (to the T helper cell) (1)</li> </ul> | <b>ACCEPT</b> macrophage presents the antigen (to the T helper cell)           |      |
|                    | <ul> <li>CD4 (antigen) of T (helper) cell binds to {antigen / macrophage}<br/>(1)</li> </ul> |  |      |
|                    |  | NB CD4 (antigen) of T (helper) cell binds to<br>{antigen-MHC complex = 2 marks | (3)  |

| Question | Indicative content  |   | Mark |
|----------|---|---|------|
| Number   |   |   |      |
| *7(b)    | Indicative content:   | Level 1:<br>1 mark = 1 comment on one set of  |      |
|          | Graph 1 (concentration of bacteria)   | data<br>2 marks = two sets of data  |      |
|          | <ul><li>as time increases the number of bacteria taken up increases</li><li>the more microorganisms present the more enhanced the uptake is</li></ul>   | commented on  |      |
|          | <ul><li>but this is not proportional to number present</li><li>effect only seen after 10 minutes</li></ul>  | Level 2:  |      |
|          | Graph 2 (number of macrophages)   | Comments must relate to phagocytosis ie not just a description of green glow        |      |
|          | <ul> <li>the more macrophages present the more uptake of bacteria</li> <li>but this difference is only marked with 100 000 macrophages present</li> <li>effect only seen after 30 minutes</li> </ul>                  | 3 marks = three sets of data<br>commented on<br>4 marks = four sets of data         |      |
|          | Graph 3 (source of macrophages)   | commented on  |      |
|          | <ul> <li>source of macrophages affects how many bacteria are taken up</li> <li>bone marrow cells take up more of both types of bacteria</li> </ul>  | Level 3:  |      |
|          | <ul><li>type of bacteria affects how many bacteria are taken up</li><li>combination of both affects uptake</li></ul>  | 5 marks = four sets of data<br>commented on, with an extended<br>comment on one set |      |
|          | Graph 4 (concentration of ATP synthase inhibitor)   | 6 marks = four sets of data<br>commented on, with an extended                       |      |
|          | <ul> <li>presence of ATP synthase inhibitor reduces uptake of bacteria</li> <li>as there is no ATP available for phagocytosis</li> <li>but differences only really seen are concentrations of 100 a.u. and</li> </ul> | comment on at least two sets of data  | 6    |
|          | above   |   |      |

| Question<br>Number | Answer   | Additional Guidance      | Mark |
|--------------------|--|--------------------------|------|
| 8(a)(i)            | <ul> <li>(other : pulmonary) 2.5 : 1 / 2.5 / 1 : 0.4 / 0.4</li> <li>(pulmonary : other) 1 : 2.5 / 2.5 / 0.4 : 1 / 0.4</li> </ul> | DO NOT ACCEPT with units | (1)  |

| Question<br>Number | Answer  | Additional Guidance  | Mark |
|--------------------|---|--|------|
| 8(a)(ii)           | An explanation that makes reference to the following:   | NB piece together  |      |
|                    | <ul> <li>(partial pressure of oxygen is low in) pulmonary artery is carrying<br/>deoxygenated blood to lungs (1)</li> </ul>                     | <b>ACCEPT</b> deoxygenated as it has come back from the body |      |
|                    | <ul> <li>(partial pressure of oxygen is high in) arterial blood is carrying<br/>oxygenated blood to the {body / cells / tissues} (1)</li> </ul> | ACCEPT oxygenated as it has been through lungs               | (2)  |

| Question<br>Number | Answer   | Additional Guidance   | Mark |
|--------------------|--|---|------|
| 8(b)(i)            | An explanation that makes reference to two of the following:   |   |      |
|                    | • because HIF can switch on gene (expression) (1)  | ACCEPT increased gene expression  |      |
|                    | <ul> <li>bind to a promotor region / stimulate transcription / stimulate<br/>protein synthesis} (1)</li> </ul> | ACCEPT increase rate of transcription IGNORE enzymes                              | (2)  |
|                    | <ul> <li>for {enzymes / proteins} involved in glycolysis (1)</li> </ul>  | ACCEPT named {enzyme / protein} involved in glycolysis e.g. enzyme that makes NAD |      |
|                    |  |   |      |

| Question<br>Number | Answer  | Additional Guidance | Mark |
|--------------------|---|---------------------|------|
| 8(b)(ii)           | An explanation that makes reference to the following:   |                     |      |
|                    | <ul> <li>(because if conditions are hypoxic) there is not much oxygen<br/>available to act as a terminal electron acceptor (1)</li> </ul> | ACCEPT no oxygen    |      |
|                    | • therefore the electron transport chain will not operate (1)   |                     |      |
|                    | <ul> <li>therefore ATP production by oxidative phosphorylation will be reduced (1)</li> </ul>   |                     |      |
|                    | <ul> <li>ATP is produced (directly / SLP) during glycolysis (during these<br/>anaerobic conditions) (1)</li> </ul>                        |                     | (4)  |

| Question<br>Number | Answer  | Additional Guidance   | Mark |
|--------------------|---|-----------------------|------|
| 8(b)(iii)          | An answer that makes reference to the following:  | DO NOT PIECE TOGETHER |      |
|                    | <ul> <li>both HIF-1 and HIF-2 increase (during hypoxia) (1)</li> </ul>                                    |                       |      |
|                    | <ul> <li>levels of HIF-2 remain high (after a small decrease) but levels of<br/>HIF-1 fall (1)</li> </ul> |                       | (2)  |

| Question<br>Number | Answer   | Additional Guidance                       | Mark |
|--------------------|--|---|------|
| 8(b)(iv)           | An explanation that makes reference to two of the following:   |   |      |
|                    | • HIF-1 and HIF-2 switch on different genes (1)  | ACCEPT bind to different promotor regions |      |
|                    | <ul> <li>{products / transcription of genes} resulting from the presence of<br/>both HIF-1 and HIF-2 are needed in the early stages of hypoxia<br/>(1)</li> </ul>          |   |      |
|                    | <ul> <li>{products / transcription of gene} resulting from the presence of<br/>HIF-2 are needed {for longer periods of hypoxia / to sustain<br/>glycolysis} (1)</li> </ul> | ACCEPT converse for HIF-1                 | (2)  |
|                    |  |   |      |

| Question<br>Number | Answer  | Additional Guidance | Mark |
|--------------------|---|---------------------|------|
| 9(a)(i)            | The only correct answer is B  |                     |      |
|                    | A is incorrect because respiration takes place in the root<br>C is incorrect because photosynthesis does not take place in the root<br>D is incorrect because respiration takes place in the root |                     | (1)  |

| Question<br>Number | Answer   | Additional Guidance | Mark |
|--------------------|--|---------------------|------|
| 9(a)(ii)           | The only correct answer is A<br>B is incorrect because pits are in the xylem<br>C is incorrect because plasmodesmata are between cells<br>D is incorrect because stomata are in the leaves |                     | (1)  |

| Question<br>Number | Answer  | Additional Guidance | Mark |
|--------------------|---|---------------------|------|
| 9(b)(i)            | <ul> <li>insect weighed before and after investigation and the difference calculated (1)</li> </ul> |                     | (1)  |

| Question<br>Number | Answer      | Additional Guidance | Mark |
|--------------------|-------------|---------------------|------|
| 9(b)(ii)           | • 42.86 (%) |                     | (1)  |

| Question<br>Number | Answer   | Additional Guidance  | Mark |
|--------------------|--|--|------|
| 9(b)(iii)          | An explanation that makes reference to two of the following:   |  |      |
|                    | <ul> <li>as a standard for comparison (1)</li> </ul>   | <b>ACCEPT</b> a description e.g. so that the effects of lower humidities can be seen |      |
|                    | <ul> <li>to prevent {water loss / dehydration} (before the start of the investigation) (1)</li> </ul>      | ACCEPT reduce water loss<br>so there will be water in the tracheoles                 |      |
|                    | <ul> <li>as this is the highest humidity {they could tolerate / that could be<br/>produced} (1)</li> </ul> | ACCEPT higher humidities might be harmful  | (2)  |

| Question<br>Number | Answer   | Additional Guidance   | Mark |
|--------------------|--|---|------|
| 9(b)(iv)           | An explanation that makes reference to three of the following:   | ACCEPT converse where appropriate   |      |
|                    | <ul> <li>water loss increases with decrease in humidity as there is more<br/>room for water molecules (1)</li> </ul> | ACCEPT fewer water molecules in air / down a (water vapour) concentration gradient (into air) |      |
|                    | <ul> <li>less water loss at {low / 20% / 0%} humidity in air because<br/>spiracles close (1)</li> </ul>              |   |      |
|                    | • water loss is greater in air with higher levels of carbon dioxide as ventilation rate is faster (1)                | ACCEPT breathing rate / gas exchange  |      |
|                    | • and the spiracles stay open (1)  |   | (3)  |

| Question<br>Number | Answer   | Additional Guidance | Mark |
|--------------------|--|---------------------|------|
| 9(c)(i)            | <ul> <li>7.776 × 10<sup>6</sup> / 7.78 × 10<sup>6</sup> / 7.8 × 10<sup>6</sup> / 8 × 10<sup>6</sup></li> </ul> |                     | (1)  |

| Question<br>Number | Indicative content   |   | Mark |
|--------------------|--|---|------|
|                    | Indicative content   | Level 1:  |      |
| *9(c)(ii)          | <ul> <li>Indicative content</li> <li>Gill filaments: <ul> <li>active fish (generally) have a greater number of gill filaments than inactive fish</li> <li>the exception is the heaviest inactive fish, <i>Tinca</i></li> <li>maybe a weak correlation between number of filaments and mass of active fish</li> </ul> </li> <li>Lamellae: <ul> <li>active fish (generally) have more lamellae on each filament</li> <li>but this does not correlate with the mass of the fish</li> <li><i>Tinca</i> is the inactive fish with the highest total number of gill filaments</li> <li>1.9 × 10<sup>6</sup></li> <li>which is way lower than <i>Thunnus</i></li> </ul> </li> </ul> | <pre>1 mark = one gill aspect<br/>commented on<br/>2 marks = two gill aspects<br/>commented on<br/>Level 2:<br/>3 marks = two gill aspects<br/>commented on with an<br/>explanation<br/>4 marks = three gill aspects<br/>commented on with an</pre> |      |
|                    | <ul> <li>and only slightly above the active fish with the least number</li> <li>Surface area:</li> <li>active fish (generally) have a greater surface are of gills than inactive fish of similar mass</li> </ul>   | explanation Level 3:  |      |
|                    | <ul> <li>but no correlation with mass</li> <li>biffusion distance: <ul> <li>very little data on diffusion distance</li> <li>active fish seem to hoave a smaller diffusion distance</li> <li>but no obvious correlation with activity or mass</li> </ul> </li> <li>Explanations: <ul> <li>higher {number of filaments / lamellae / surface area} increases gas exchange</li> </ul> </li> </ul>  | 5 marks = four gill aspects<br>commented on, with an<br>explanation<br>6 marks = four gill aspects<br>commented on, with an<br>explanation linking to muscle<br>contraction   |      |
|                    | <ul> <li>a smaller diffusion increases gas exchange</li> <li>so more oxygen available for aerobic respiration</li> <li>therefore more ATP can be generated</li> <li>for the contraction of muscles (of the active fish)</li> <li>more energy needed for movement of heavier fish</li> </ul>  |   | 6    |
