AS CHEMISTRY

Paper 2 Organic and Physical Chemistry

Thursday 21 May 2020 Morning Time allowed: 1 hour 30 minutes

Materials

For this paper you must have:

- the Periodic Table/Data Sheet, provided as an insert (enclosed)
- a ruler with millimetre measurements
- a scientific calculator, which you are expected to use where appropriate.

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do **not** write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- All working must be shown.
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.

Advice

You are advised to spend about 65 minutes on Section A and 25 minutes on Section B.

Do not write outside the box

	1 oblevenues and also be preduced by the reaction between survey and the '	Do no outsio
0 1 3	1-chloropropane can also be produced by the reaction between propane and chlorine in the presence of ultraviolet light.	
	State why ultraviolet light is needed for this reaction to occur.	
	Give an equation for each propagation step in the formation of 1-chloropropane from propane.	
	[3 marks]	
	Why ultraviolet light is needed	
	Propagation step 1	
	Propagation step 2	
0 1.4	The C–Cl bond in 1-chloropropane is polar because carbon and chlorine have	
	different electronegativities.	
	Define the term electronegativity. [1 mark]	
	Question 1 continues on the next page	

		Do not write outside the
0 1 . 5	Ammonia reacts with 1-chloropropane to form propylamine.	box
	Name and outline the mechanism for this reaction. [5 marks]	
	Outline of mechanism	
		14

02	A student investigates the effect of temperature on the rate of reaction between sodium thiosulfate solution and dilute hydrochloric acid.						
	Na ₂ S ₂ O ₃ (aq) +	+ 2 HCl(aq)	$) \rightarrow 2 \text{NaC}$	Cl(aq) + S0	D ₂ (g) + S((s) + H ₂ O(I))
	The student mixes the sc paper marked with a cros	-	jether in a	flask and	places th	e flask on a	a piece of
	The student records the t because the mixture bec			disappear	. The cro	ss disappe	ars
	Table 2 shows the stude	nt's results	6.				
			Table	2			
	Temperature / °C	22	31	36	42	49	54
	Time, t, for cross to disappear / s	87	48	36	26	44	12
	$\left \frac{1}{t}\right/s^{-1}$	0.0115	0.0208	0.0278	0.0385	0.0227	
	The student uses a stopwatch to measure the time. The stopwatch shows each to the nearest 0.01 s Suggest why the student records the times to the nearest second and not to the nearest 0.01 s [1]				o the [1 mark]		
02.2	The rate of reaction is pro	oportional	to $\frac{1}{t}$				
	Complete Table 2 .						[1 mark]

0 2 4	Use your line of best fit to estimate the time for the cross to disappear at 40 $^\circ\text{C}$ Show your working.	Do not write outside the box
	[1 mark]	
	Times	
0 2.5	Suggest, by considering the products of this reaction, why small amounts of reactants are used in this experiment.	
	[1 mark]	
02.6	The student could do the experiment at lower temperatures using an ice bath.	
	Suggest why the student chose not to carry out experiments at temperatures in the	
	range 1–10 °C [1 mark]	
		<u> </u>

In each method, the student uses 1.00 g of organic starting material.

The yield of methylpropanal obtained using each method and other data are included in **Table 3**.

Table	3
-------	---

	Method 1	Method 2
Yield of methylpropanal / mg	552	778
Percentage yield		80.0%
Percentage atom economy	62.1%	

Calculate the percentage yield for Method 1.

Calculate the percentage atom economy for Method 2.

State the importance of percentage yield and percentage atom economy when choosing the method used to make a compound.

[6 marks]

% yield	
Importance of percentage yield	
% atom economy	
Importance of percentage atom economy	

0 4	This question is about pentan-2-ol and pent-1-ene.	Do not write outside the box
0 4.1	The boiling point of pentan-2-ol is 119 °C The boiling point of pent-1-ene is 30 °C Explain why pentan-2-ol has a higher boiling point than pent-1-ene. [3 marks]	I

0 6	This question is about poly(chloroethene), commonly known as PVC.	Do not write outside the box
06.1	Give an equation, showing structural formulas, for the conversion of chloroethene into poly(chloroethene).	
	[3 marks]	
06.2	State what you would observe if bromine water was added to poly(chloroethene).	
	Explain this observation. [2 marks]	
	Observation	
	Explanation	
0 6.3	Plasticisers are often added during the manufacture of PVC. The structure of the plasticiser DEHP is shown.	
	Deduce the molecular formula of DEHP and state why a plasticiser is added to PVC.	
	[2 marks]	
	Molecular formula	
	Why a plasticiser is added	
		7

0 7	This question is about ethanedioic acid $(H_2C_2O_4)$ which is a dicarboxylic acid.	Do not write outside the box
0 7.1	Draw the skeletal formula of ethanedioic acid. [1 mark]	
0 7.2	Ethanedioic acid is formed by the oxidation of ethane-1,2-diol (HOCH ₂ CH ₂ OH).	
	State suitable reagent(s) and a condition for this reaction. [2 marks]	
	Reagent(s)	
	Condition	
	Question 7 continues on the next page	

0 7 . 3 Ethanedioic acid reacts with an excess of sodium hydroxide to form sodium ethanedioate.

 $H_2C_2O_4(aq) + 2\,NaOH(aq) \rightarrow Na_2C_2O_4(aq) + 2\,H_2O\left(I\right)$

A student mixes 10.0 cm^3 of $0.400 \text{ mol dm}^{-3}$ ethanedioic acid with 50.0 cm^3 of $0.200 \text{ mol dm}^{-3}$ sodium hydroxide.

Show that the sodium hydroxide is in excess.

Calculate the mass, in mg, of sodium ethanedioate that can be formed in this reaction.

[5 marks]

Mass of sodium ethanedioate _____ mg
