## A-level PHYSICS

## Paper 3

## Section B Astrophysics

## Materials

For this paper you must have:

- a pencil and a ruler
- a scientific calculator
- a Data and Formulae Booklet
- a protractor.

## Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

Time allowed: The total time for both sections of this paper is 2 hours. You are advised to spend approximately 50 minutes on this section.

| For Examiner's Use |  |
| :---: | :---: |
| Question | Mark |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |
| 5 |  |
| TOTAL |  |

- Show all your working.

## Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 35 .
- You are expected to use a scientific calculator where appropriate.
- A Data and Formulae Booklet is provided as a loose insert.

## Section B

Answer all questions in this section.

| 0 | 1 |
| :--- | :--- | Figure 1 shows the evolution of a star similar to the Sun on a Hertzsprung-Russell (HR) diagram.

Figure 1

w
X $\qquad$
Y $\qquad$
Z $\qquad$

Theta Carinae is a star with a radius five times that of the Sun. It has a surface temperature of 31000 K .

| 0 | 1 | .2 |
| :--- | :--- | :--- | Annotate Figure 1 with a $\mathbf{T}$ to show the position of Theta Carinae.

$\begin{array}{llll}0 & 1 & 4 & 4\end{array}$ The astronomer suggests that the Earth-sized planet receives a similar amount of power from Theta Carinae as the Earth does from the Sun.

The average power output of the Sun is $3.8 \times 10^{26} \mathrm{~W}$.
Determine the orbital radius of the Earth-sized planet orbiting Theta Carinae.
[5 marks]

| $\mathbf{0}$ | $\mathbf{2}$. | $\mathbf{1}$ Which graph shows the light curve for a typical type la supernova? |
| :--- | :--- | :--- |

Tick $(\checkmark)$ one box.

A $\square$
B $\square$
C $\square$

## D

$\square$

Deduce whether a type la supernova which occurred in Andromeda can be observed from Earth with the naked eye.

| :--- | :--- | Miaplacidus and Avior are two stars in the constellation Carina. Miaplacidus is a class A star.

Avior is a class K star.
Figure 2 shows how the intensity of radiation arriving at the Earth varies with wavelength for one of these stars. Only the important features of the variation are shown.

Figure 2

Deduce, with reference to Figure 2, the identity of the star.
In your answer you should:

- explain the overall shape of the graph
- describe the processes in the star that lead to the decreases in intensity
- state the identity of the star.

| 0 | 4 | IC2497 is a galaxy that contained a quasar. It is believed that the quasar stopped |
| :--- | :--- | :--- | emitting radiation several thousand years ago.

| :--- | :--- | :--- |

Table 1

| Telescope | Diameter / m | Dish shape |
| :---: | :---: | :---: |
| Arecibo | 305 | spherical |
| Lovell | 76 | parabolic |

Each telescope detects radio waves with a wavelength of 21 cm .
Compare the performances of the telescopes in Table 1 when both are used to observe the same faint radio objects.
