## Paper 2

## Materials

For this paper you must have:

- a pencil and a ruler

Time allowed: 1 hour 30 minutes You are advised to spend about 35 minutes on Section C

- a scientific calculator
- a Data and Formulae Booklet
- a protractor.

## Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).

- Do all rough work in this book. Cross through any work you do not want to be marked.
- Show all your working.

## Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 70 .
- You are expected to use a scientific calculator where appropriate.
- A Data and Formulae Booklet is provided as a loose insert.

## Section A

Answer all questions in this section.

| $\mathbf{0}$ | $\mathbf{1}$ A student investigates stationary waves using microwaves. |
| :--- | :--- | :--- |

Figure 1 shows a metre ruler fixed to a bench. The student places a microwave transmitter $\mathbf{T}$ at one end of the ruler and a vertical metal reflector $\mathbf{R}$ at the other end. $\mathbf{R}$ is at a right angle to the ruler.

Figure 1
view from above

The student places a microwave detector $\mathbf{D}$ approximately one-third of the distance from $\mathbf{T}$ to $\mathbf{R}$. When $\mathbf{T}$ is switched off, the microammeter connected to $\mathbf{D}$ reads zero.

When $\mathbf{T}$ is switched on, stationary waves are produced between $\mathbf{T}$ and $\mathbf{R}$, and the microammeter registers a current. When the student moves $\mathbf{D}$ along the ruler, the size of the current changes between maximum and minimum values.

The student measures the current at different positions of $\mathbf{D}$ along the ruler to identify a position $\mathbf{P}$ of the minimum current.

Figure $\mathbf{2}$ is a plot of the measurements taken near $\mathbf{P}$.

The student moves $\mathbf{D}$ along the metre ruler towards $\mathbf{R}$ and observes a series of maximum and minimum readings on the microammeter. He identifies $\mathbf{Q}$ as the position of the 8th minimum current from $\mathbf{P}$. He measures the distance $\mathbf{P Q}$ to be 50.9 cm , as shown in Figure 3.

| $\mathbf{0}$ | $\mathbf{2}$ |
| :--- | :--- | :--- | $\mathbf{2}$ Calculate the tension in the wire when $W$ is 1.0 N .

tension $=$ N

Question 2 continues on the next page

It can be shown that
where $\quad E=$ Young modulus of the metal
$A=1.11 \times 10^{-7} \mathrm{~m}^{2}$
$x=1.50 \mathrm{~m}$
$k=$ a constant.

A student measures $y$ for different values of $W$ and plots the graph shown in Figure 8.

## Section C

Each of Questions $\mathbf{0 6}$ to $\mathbf{3 5}$ is followed by four responses, A, B, C and D.
For each question select the best response.

Only one answer per question is allowed.
For each question, completely fill in the circle alongside the appropriate answer.
CORRECT METHOD $\quad \square$ WRONG METHODS $\infty$
If you want to change your answer you must cross out your original answer as shown. $\qquad$
If you wish to return to an answer previously crossed out, ring the answer you now wish to select as shown.

You may do your working in the blank space around each question but this will not be marked. Do not use additional sheets for this working.
