## PHYSICS

## Paper 1

Tuesday 14 May 2019
Morning
Time allowed: 1 hour 30 minutes

## Materials

For this paper you must have:

- a pencil and a ruler
- a scientific calculator
- a Data and Formulae Booklet.

## Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- Do all rough work in this book. Cross through any work you do not want

| For Examiner's Use |  |
| :---: | :---: |
| Question | Mark |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |
| 5 |  |
| 6 |  |
| TOTAL |  | to be marked.

- Show all your working.

## Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 70 .
- You are expected to use a scientific calculator where appropriate.
- A Data and Formulae Booklet is provided as a loose insert.

| Answer all questions in the spaces provided. |  |
| :---: | :---: |
| 0 1 | Deuterium is an isotope of hydrogen. Its nucleus contains one proton and one neutron. |
|  | Calculate the specific charge of the deuterium nucleus. |

specific charge $=$ $\qquad$ $\mathrm{C} \mathrm{kg}^{-1}$

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{2}$ The proton and neutron in the deuterium nucleus are held together by the strong |
| :--- | :--- | :--- | :--- | nuclear force.

Which is an exchange particle of the strong nuclear force?
Tick $(\checkmark)$ one box.
muon

photon

pion

$\mathrm{W}^{+}$boson

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{3}$ The deuterium nucleus is stable. |
| :--- | :--- | :--- |

Describe how the variation of the strong nuclear force with distance contributes to the stability of the deuterium nucleus.

## Question 1 continues on the next page

| $\mathbf{0}$ | $\mathbf{1}$ | .4 |
| :--- | :--- | :--- | Tritium is an isotope of hydrogen. Its nucleus contains one proton and two neutrons. Tritium undergoes radioactive decay.

Three modes of radioactive decay are

- alpha decay
- beta minus ( $\beta^{-}$) decay
- electron capture.

Deduce which of these modes could produce the nucleus of another element when the tritium nucleus decays.
$\qquad$
$\qquad$

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

| $\mathbf{0}$ | $\mathbf{2}$ | A battery of emf 7.4 V and negligible internal resistance is used to power a heating |
| :--- | :--- | :--- | element inside a glove. The heating element has a resistance of $3.7 \Omega$.

| $\mathbf{0}$ | $\mathbf{2}$ | l |
| :--- | :--- | :--- |
| $\mathbf{1}$ |  |  | The designers state that the battery can produce a current of 2.0 A in the heating element for 240 minutes.

Calculate the energy dissipated in the heating element in this time.
$\qquad$

| $\mathbf{0}$ | $\mathbf{2}$ | $\mathbf{2}$ The length of the heating element needed is about 0.85 m. |
| :--- | :--- | :--- | The designer considers using a carbon fibre tape for the heating element. Table 1 gives information for the carbon fibre tape.

Table 1

| Cross-sectional area / m |  |
| :---: | :---: |
| $\mathbf{2}$ | Resistivity $/ \Omega \mathbf{m}$ |
| $4.9 \times 10^{-6}$ | $2.0 \times 10^{-5}$ |

Deduce whether the carbon fibre tape is suitable for making the heating element for the glove.

## Question 2 continues on the next page

| $\mathbf{0}$ | $\mathbf{2}$. | 3 |
| :--- | :--- | :--- | A light emitting diode (LED) is used to indicate that the switch in the glove is closed,

Figure 1

Figure 2 shows part of the characteristic graph for the LED.
Figure 2

The circuit is designed so that the potential difference across the LED is 2.2 V when the switch is closed.

Calculate the resistance of R .
$\qquad$

| 0 | 3 | $F i g u r e$ |
| :--- | :--- | :--- |
| 3 |  |  |

Figure 3

Two identical stretched elastic ropes are fixed to a cage with passengers inside. The loaded cage is held in place by a clamp. When the clamp is released the elastic ropes accelerate the loaded cage vertically into the air.
$\mathbf{P}$ is the point where the rope attaches to the top of the vertical tower.
$\mathbf{Q}$ is the point where the rope attaches to the cage. $\mathbf{Q}$ is level with the centre of mass of the loaded cage.

Before release, the tension $T$ in each elastic rope is $3.7 \times 10^{4} \mathrm{~N}$ and each rope makes an angle of $20^{\circ}$ with the vertical tower.

The total mass $M$ of the loaded cage is $1.2 \times 10^{3} \mathrm{~kg}$ and the mass of the elastic ropes is negligible.

| $\mathbf{0}$ | $\mathbf{3} . \mathbf{1}$ Show that the downward force $F$ exerted by the clamp on the loaded cage is about |
| :--- | :--- | :--- | $6 \times 10^{4} \mathrm{~N}$.

| 0 | 3 | 2 |
| :--- | :--- | :--- |

$\qquad$

| $\mathbf{0}$ | $\mathbf{3}$ | $\mathbf{3}$ The unstretched length of each elastic rope is 24 m . The ropes obey Hooke's Law for |
| :--- | :--- | :--- | :--- | all extensions used in the ride.

The vertical distance between points $\mathbf{P}$ and $\mathbf{Q}$ on Figure $\mathbf{3}$ is 35 m .
Show that the total elastic potential energy stored in both ropes before the loaded cage is released is about $5 \times 10^{5} \mathrm{~J}$.

| 0 | 3 | 4 |
| :--- | :--- | :--- | The designers of the ride claim that the loaded cage will reach a height of 50 m above $\mathbf{Q}$.

Deduce whether this claim is justified.

| 0 | 3 | 5 |
| :--- | :--- | :--- | $90 \mathrm{~km} \mathrm{~h}^{-1}$.

Calculate, in J, the kinetic energy of the loaded cage when it travels at $90 \mathrm{~km} \mathrm{~h}^{-1}$.
[3 marks]
kinetic energy = J

| :--- | :--- | :--- |

Give your answer to an appropriate number of significant figures.

| $\mathbf{0}$ | $\mathbf{4}$ | $\mathbf{3}$ Calculate the critical angle for the water-air boundary. |
| :--- | :--- | :--- | :--- |

critical angle $=$ $\qquad$ degrees

| 0 | 4 | 4 | Tyndall's experiment led to the development of optical fibres. |
| :--- | :--- | :--- | :--- |

Figure 5 shows a step-index optical fibre.
Figure 5

Discuss the properties of a step-index optical fibre.
Your answer should include:

- the names of part $\mathbf{X}$ and part $\mathbf{Y}$
- a description of the functions of $\mathbf{X}$ and $\mathbf{Y}$
- a discussion of the problems caused by material dispersion and modal dispersion and how these problems can be overcome.

Question 4 continues on the next page

| 0 | 4 | 5 | Scientists use optical fibres to monitor earthquakes. Light travelling through an optical |
| :--- | :--- | :--- | :--- | fibre can be reflected by impurities in the fibre, as shown in Figure 6.

Figure 6

Earthquakes bend the optical fibre slightly, as shown in Figure 7. This changes the amount of reflected light.

Figure 7

Suggest why the amount of reflected light changes as the fibre bends.
You may draw on Figure 7 as part of your answer.

## Turn over for the next question

| 0 | 5 | A student investigates moments by suspending a 100 cm ruler from two force meters, |
| :--- | :--- | :--- | $\mathbf{A}$ and $\mathbf{B}$. A and $\mathbf{B}$ are attached to the ruler 12.0 cm from each end. Their supports are adjusted to make $\mathbf{A}$ and $\mathbf{B}$ vertical and the ruler horizontal.

Figure 8 is a simplified diagram of the experiment.
Figure 8

| $\mathbf{0}$ | $\mathbf{5}$ | $\mathbf{1}$ |
| :--- | :--- | :--- | The ruler is uniform and weighs 1.12 N .

Determine the reading on $\mathbf{A}$.
reading $=$ $\qquad$ N

| $\mathbf{0}$ | $\mathbf{5}$. | $\mathbf{2}$ The student suggests that the forces exerted on the ruler by $\mathbf{A}$ and $\mathbf{B}$ act as a couple. |
| :--- | :--- | :--- |

Discuss whether his suggestion is correct.
[2 marks]
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\begin{array}{lll}\mathbf{0} & \mathbf{5} & .3\end{array}$ The student hangs a mass of weight $W$ on the ruler between $\mathbf{A}$ and $\mathbf{B}$, as shown in
Figure 9.
He adjusts the supports so that $\mathbf{A}$ and $\mathbf{B}$ are again vertical and the ruler is horizontal. The mass hangs at a distance $d$ from $\mathbf{A}$.

Figure 9

The reading on $\mathbf{A}$ is 0.82 N and the reading on $\mathbf{B}$ is 0.62 N .
Determine

- $W$
- d.

$$
\begin{aligned}
W & =\mathrm{C}^{\mathrm{N}} \\
d & =\square \mathrm{m}
\end{aligned}
$$

| 0 | 5 | .4 | A second student sets up the same apparatus as shown in Figure 9. |
| :--- | :--- | :--- | :--- |

She suspends the mass in the same position on the ruler as in question 05.3.
She moves the supports to make $\mathbf{A}$ and $\mathbf{B}$ vertical but does not make the ruler horizontal.

Discuss whether the readings on $\mathbf{A}$ and $\mathbf{B}$ taken by this student are different to those in question 05.3.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
