## A-level PHYSICS

## Paper 3

## Section A

Friday 5 June 2020

## Materials

For this paper you must have:

- a pencil and a ruler
- a scientific calculator
- a Data and Formulae Booklet.

## Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).

| For Examiner's Use |  |
| :---: | :---: |
| Question | Mark |
| 1 |  |
| 2 |  |
| 3 |  |
| TOTAL |  |

- Do all rough work in this book. Cross through any work you do not want to be marked.
- Show all your working.

## Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 45 .
- You are expected to use a scientific calculator where appropriate.
- A Data and Formulae Booklet is provided as a loose insert.

Time allowed: The total time for both sections of this paper is 2 hours. You are advised to spend approximately 70 minutes on this section.

## Section A

Answer all questions in this section.

| 0 | 1 | A simple pendulum performs oscillations of period $T$ in a vertical plane. |
| :--- | :--- | :--- |

Figure 1 shows views of the pendulum at the equilibrium position and at the instant of release. Figure 1 also shows a rectangular card marked with a vertical line.

Figure 1

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{1}$ The card can be used as a fiducial mark to reduce uncertainty in the measurement |
| :--- | :--- | :--- | of $T$.

Annotate Figure 1 to show a suitable position for the fiducial mark.
Explain why you chose this position.
$\qquad$
$\qquad$
$\qquad$

| 0 | 1 | .2 |
| :--- | :--- | :--- | The period of the pendulum is constant for small-amplitude oscillations.

Figure 2 shows an arrangement used to determine the maximum amplitude that can be considered to be small, by investigating how $T$ varies with amplitude.

Figure 2

Describe a suitable procedure to determine $A_{\mathrm{R}}$, the amplitude of the pendulum as it is released.
You may add detail to Figure 2 to illustrate your answer.
$\qquad$

## Question 1 continues on the next page

$\begin{array}{llll}0 & 1 & 3 & \text { Figure } 3 \text { shows some of the results of the experiment. }\end{array}$
Figure 3

Estimate, using Figure 3, the expected percentage increase in $T$ when $A_{\mathrm{R}}$ increases from 0.35 m to 0.70 m .
Show your working.
percentage increase $=$ \%

Question 1 continues on the next page

In another experiment the pendulum is released from a fixed amplitude.
The amplitudes $A_{n}$ of successive oscillations are recorded, where $n=1,2,3,4,5 \ldots$.
Table 1 shows six sets of readings for the amplitude $A 5$.
Table 1

| $\boldsymbol{A}_{5} / \mathbf{m}$ | 0.217 | 0.247 | 0.225 | 0.223 | 0.218 | 0.224 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

Go on to calculate the percentage uncertainty in this result.

$$
\begin{aligned}
A_{5} & = \\
\text { percentage uncertainty } & =\square
\end{aligned} \begin{aligned}
& \mathrm{m} \\
& \%
\end{aligned}
$$

| 0 | $\mathbf{1}$ | $\mathbf{5}$ Table $\mathbf{2}$ shows results for $A_{n}$ and the corresponding value of $\ln \left(A_{n} / \mathrm{m}\right)$ for certain |
| :--- | :--- | :--- | :--- | values of $n$.

Table 2

| $\boldsymbol{n}$ | $\boldsymbol{A}_{\boldsymbol{n}} / \mathbf{m}$ | $\ln \left(\boldsymbol{A}_{\boldsymbol{n}} / \mathbf{m}\right)$ |
| :---: | :---: | :---: |
| 2 | 0.238 | -1.435 |
| 4 | 0.225 |  |
| 7 | 0.212 | -1.551 |
| 10 | 0.194 | -1.640 |
| 13 | 0.183 | -1.698 |

## Complete Table 2.

| 0 | 1 | 6 | Plot on Figure 4 a graph of $\ln \left(A_{n} / \mathrm{m}\right)$ against $n$. $. . .0 \mid$ |
| :--- | :--- | :--- | :--- |

Figure 4

Question 1 continues on the next page

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{7}$ | It can be shown that |
| :--- | :--- | :--- | :--- |

$$
A_{n}=A_{0} \delta^{-n}
$$

where $\quad A_{0}$ is the amplitude of release of the pendulum $\delta$ is a constant called the damping factor.

Explain how to find $\delta$ from your graph.
You are not required to determine $\delta$.

Turn over for the next question Turn over

Figure 5 shows apparatus used to investigate the bending of a beam.
Figure 5

The beam is placed horizontally on rigid supports.
The distance $L$ between the supports is 80 cm .
A travelling microscope is positioned above the midpoint of the beam and focused on the upper surface.

| $\mathbf{0}$ | $\mathbf{2}$. | $\mathbf{1}$ | Figure 6 shows an enlarged view of both parts of the vernier scale. |
| :--- | :--- | :--- | :--- |

Figure 6

The smallest division on the fixed part of the scale is 1 mm .
What is the value of the vernier reading $R_{0}$ in mm ?
Tick ( $\checkmark$ ) one box.
34.8

37.8

45.8
49.8 $\square$

Question 2 continues on the next page

| $\mathbf{0}$ | $\mathbf{2} .2$ Figure 7 shows the beam bending when a hanger of mass 0.050 kg is suspended |
| :--- | :--- | :--- | from the midpoint.

Figure 7

The microscope is refocused on the upper surface and the new vernier reading $R$ is recorded.
The vertical deflection $s$ of the beam is equal to $\left(R-R_{0}\right)$.
The total mass $m$ suspended from the beam is increased in steps of 0.050 kg .
A value of $s$ is recorded for each $m$ up to a value of $m=0.450 \mathrm{~kg}$.
Further values of $s$ are then recorded as $m$ is decreased in 0.050 kg steps until $m$ is zero.

Student A performs the experiment and observes that values of $s$ during unloading are sometimes different from the corresponding values for loading.

State the type of error that causes the differences student A observes.

| $\mathbf{0}$ | $\mathbf{2} .3$ | Student $\mathbf{B}$ performs the experiment using a thinner beam but with the same width and |
| :--- | :--- | :--- | :--- | made from the same material as before.

Discuss one possible advantage and one possible disadvantage of using the thinner beam.
[3 marks]
Advantage
$\qquad$
$\qquad$
$\qquad$
$\qquad$
Disadvantage $\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Question 2 continues on the next page

Figure 8

It can be shown that $s=\frac{\eta m}{E}$
where $E$ is the Young modulus of the material of the beam and $\eta$ is a constant.

# Deduce in $\mathrm{s}^{-2}$ the order of magnitude of $\eta$. <br> $$
E=1.14 \mathrm{GPa}
$$ 

order of magnitude of $\eta=$ $\qquad$ $\mathrm{s}^{-2}$

Question 2 continues on the next page

| $\mathbf{0}$ | $\mathbf{2}$ | $\mathbf{5}$ Student $\mathbf{C}$ performs a different experiment using the same apparatus shown |
| :--- | :--- | :--- | in Figure 5 on page 10.

A mass $M$ is suspended from the midpoint of the beam.
The vertical deflection $s$ of the beam is measured for different values of $L$.
Figure 9 shows a graph of the results for this experiment.
Figure 9

Figure 9 shows that $\log _{10}(s / m)$ varies linearly with $\log _{10}(L / m)$.
State what this shows about the mathematical relationship between $s$ and $L$. You do not need to do a calculation.
$\qquad$
$\qquad$
$\qquad$

$\qquad$ m

| $\mathbf{0}$ | $\mathbf{2} .7$ | $\mathbf{7}$ Determine $M$ using Figure 8. |
| :--- | :--- | :--- |

| $\mathbf{0}$ | $\mathbf{3}$ Figure 10 shows a partly-completed circuit used to investigate the emf $\varepsilon$ and the |
| :--- | :--- | :--- | internal resistance $r$ of a power supply.

The resistance of $\mathbf{P}$ and the maximum resistance of $\mathbf{Q}$ are unknown.
Figure 10

| 0 | 3 | 1 |
| :--- | :--- | :--- |
| Complete Figure 10 |  |  |

Question 3 continues on the next page

Figure 11 shows a different experiment carried out to confirm the results for $\varepsilon$ and $r$.
Figure 11

measuring the

Initially the power supply is connected in series with an ammeter and a $22 \Omega$ resistor. The current $I$ in the circuit is measured.

The number $n$ of $22 \Omega$ resistors in the circuit is increased as shown in Figure 11. The current $I$ is measured after each resistor is added.

It can be shown that

$$
\frac{22}{n}=\frac{\varepsilon}{I}-r
$$

Figure 12 on page 22 shows a graph of the experimental data.

## Question 3 continues on the next page

Figure 12

| 0 | 3 | 3 |
| :--- | :--- | :--- |

| 0 | 3 | 4 | Figure 13 shows the circuit when four resistors are connected. |
| :--- | :--- | :--- | :--- |

Figure 13

Show, using Figure 12, that the current in the power supply is about 0.25 A .

| 0 | 3 | 5 |
| :--- | :--- | :--- |

- the potential difference (pd) across the power supply
- $r$.
$\mathrm{pd}=$ $\qquad$

| 0 | 3 | 6 | Figure 14 shows the plots for $n=1$ and $n=14$ |
| :--- | :--- | :--- | :--- |

Figure 14

Three additional data sets for values of $n$ between $n=1$ and $n=14$ are needed to complete the graph in Figure 14.

Suggest which additional values of $n$ should be used. Justify your answer.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

| $\mathbf{0}$ | $\mathbf{3} . \mathrm{Z}$ |
| :--- | :--- | :--- | The experiment is repeated using a set of resistors of resistance $27 \Omega$.

The relationship between $n$ and $I$ is now

$$
\frac{27}{n}=\frac{\varepsilon}{I}-r
$$

Show on Figure 14 the effect on the plots for $n=1$ and $n=14$ You do not need to do a calculation.
