## GCSE <br> CHEMISTRY

## Foundation Tier <br> Paper 1

Time allowed: 1 hour 45 minutes

## Materials

For this paper you must have:

- a ruler
- a scientific calculator
- the periodic table (enclosed).

## Instructions

- Use black ink or black ball-point pen.
- Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.
- In all calculations, show clearly how you work out your answer.

## Information

| For Examiner's Use |  |
| :---: | :---: |
| Question | Mark |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |
| 5 |  |
| 6 |  |
| 7 |  |
| 8 |  |
| 9 |  |
| 10 |  |
| TOTAL |  |

- The maximum mark for this paper is 100.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.

$\begin{array}{lllll}0 & \mathbf{1} & \mathbf{2} & \text { Substance B contains two types of atoms. }\end{array}$
The atoms are chemically combined together in fixed proportions.
Which type of substance is B?

Tick $(\checkmark)$ one box.

Compound

Metallic element

Mixture

Non-metallic element

\section*{| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{3}$ What is the name of the elements in Group 0 of the periodic table? |
| :--- | :--- | :--- | :--- |}

Tick ( $\checkmark$ ) one box.

Alkali metals $\square$

Halogens

Noble gases

Transition metals $\square$

| 0 | 1 | 4 | Which statement about the elements in Group 0 is correct? |
| :--- | :--- | :--- | :--- |

Tick ( $\checkmark$ ) one box.

All elements in the group are very reactive.

All elements in the group form negative ions.

The boiling points increase down the group.

The relative atomic masses $\left(A_{r}\right)$ decrease down the group.

| 0 1 |  | Neon is in Group 0. <br> What type of particles are in a sample of neon? | [1 mark] |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
|  |  | Tick ( $\checkmark$ ) one box. |  |
|  |  | Atoms |  |
|  |  | Ions |  |
|  |  | Molecules |  |

What type of particles are in a sample of neon?
Tick ( $\checkmark$ ) one box.

Atoms

Molecules

| 0 | 1. | 6 |
| :--- | :--- | :--- |

Figure 1

Determine the empirical formula of this oxide.

Empirical formula $=\mathrm{XO}$

A nanoparticle of a metallic element is a cube.
Figure 2 shows a diagram of the nanoparticle.
Figure 2

| 0 | 1 | .7 |
| :--- | :--- | :--- | The surface area of a cube is given by the equation:

$$
\text { surface area }=(\text { length of side })^{2} \times 6
$$

Calculate the surface area of the cube in Figure 2.
Give your answer to 2 significant figures.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Surface area ( 2 significant figures) $=$ $\qquad$ $n m^{2}$

| $\mathbf{0}$ | $\mathbf{1}$ | .8 | Fine and coarse particles of the metallic element are also cubes. |
| :--- | :--- | :--- | :--- |

The length of a fine particle cube is 10 times smaller than the length of a coarse particle cube.

How does the surface area to volume ratio of the fine particle cube compare with that of the coarse particle cube?

Tick ( $\checkmark$ ) one box.

Both surface area to volume ratios are the same.

The surface area to volume ratio of the fine particle is 10 times greater.

The surface area to volume ratio of the fine particle is 10 times smaller.

## Turn over for the next question

| 02 | This question is about chemical cells and batteries. |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 02 | Three different types of battery can be used to power a TV remote control. <br> Table 1 gives information about these batteries. <br> Table 1 |  |  |  |
|  |  | Zinc-carbon battery | Alkaline battery | Nickelmetal hydride battery |
|  | Cost of battery in $£$ (pounds) | 0.17 | 0.50 | 1.50 |
|  | Rechargeable? | No | No | Yes |
|  | Time before needing to replace or recharge in months | 5 | 12 | 8 |

Give one advantage of each type of battery.

Zinc-carbon $\qquad$
$\qquad$
Alkaline $\qquad$
$\qquad$
Nickel-metal hydride $\qquad$

| $\mathbf{0}$ | $\mathbf{7} \quad$ This question is about electrolysis. |
| :--- | :--- |

Some students investigated the electrolysis of silver nitrate solution.
This electrolysis produces silver at the negative electrode.
Figure 11 shows the apparatus.
Figure 11

This is the method used.

1. Weigh the negative electrode.
2. Set up the apparatus shown in Figure 11.
3. Switch on the power supply.
4. Switch off the power supply after five minutes.
5. Rinse the negative electrode with water and allow to dry.
6. Reweigh the negative electrode.
7. Repeat steps 1 to 6 for different times.

| $\mathbf{0}$ | $\mathbf{7}$. | $\mathbf{1}$ | Some silver did not stick to the negative electrode but fell to the bottom of the beaker. |
| :--- | :--- | :--- | :--- |

The students needed to weigh this silver.
How could the students separate the silver from the silver nitrate solution?
[1 mark]
Tick ( $\checkmark$ ) one box.

By chromatography $\square$
By crystallisation

By distillation $\square$
By filtration

Table 5 shows the students' results.
Table 5

| Time in minutes | Mass of silver in $\mathbf{g}$ |
| :---: | :---: |
| 0 | 0.00 |
| 5 | 0.06 |
