## **Bonding and Structure**

1. Phosgene, COC*l*<sub>2</sub>, exists as simple molecules.

The displayed formula of a phosgene molecule is shown below.

Draw a '*dot-and-cross*' diagram of a phosgene molecule.
 Show outer electrons only.

ii. Name the shape of a phosgene molecule and explain why it has this shape.

| Name of shape<br> | <br> |     |
|-------------------|------|-----|
| Explanation       | <br> |     |
|                   |      |     |
|                   | <br> |     |
|                   | <br> | [3] |

2(a). Sodium sulfide, Na<sub>2</sub>S, is an ionic compound of sodium, Na, and sulfur, S.Draw a '*dot-and-cross*' diagram to show the bonding in sodium sulfide.Show outer electrons only.

[1]

(b). The table below compares the properties of sodium sulfide, sodium and sulfur.

Complete the table.

|  |        | Sodium sulfide | Sodium | Sulfur |
|--|--------|----------------|--------|--------|
|  |        |                |        |        |
| Melting point / °C   |        | 1180           | 98     | 113    |
|  |        |                |        |        |
| Type of structure<br>( <b>giant</b> or <b>simple</b> )       |        |                |        |        |
|  | solid  |                |        |        |
| Electrical<br>conductivity<br>( <b>good</b> or <b>poor</b> ) | liquid |                |        |        |

[3]

- **3.** Solid barium chloride has a high melting point. Barium chloride dissolves in water to form a solution that can be used to test for sulfate ions.
  - i. Draw a '*dot-and-cross*' diagram to show the bonding in solid barium chloride. Show outer electrons only.

[2]

ii. A solution of barium chloride can be made in the laboratory using dilute hydrochloric acid.

Suggest a compound that can be reacted with hydrochloric acid to make barium chloride.

[1]

**4.** Bromine is a reactive element. It combines with other non-metals to form covalent compounds. Phosphorus tribromide, PBr<sub>3</sub>, and iodine monobromide, IBr, are examples of covalent compounds used in organic synthesis.

PBr<sub>3</sub> can be prepared by heating bromine with phosphorus, P<sub>4</sub>.

i. Write an equation for this reaction.

\_\_\_\_\_[1]

ii. How many molecules are present in 1.3535 g of PBr<sub>3</sub>?

number of molecules = .....[3]

iii. The '*dot-and-cross*' diagram of a molecule of PBr<sub>3</sub> is given below.

Name the shape of this molecule and explain why the molecule has this shape.

name:\_\_\_\_\_

explanation:

\_\_\_\_\_

5. The hydroxyl group, –OH, is responsible for many properties of alcohols.

Methanol, CH<sub>3</sub>OH, is soluble in water because it has polar bonds.

Pauling electronegativity values for carbon, oxygen and hydrogen are shown below.

| Element  | Electronegativity |
|----------|-------------------|
| Carbon   | 2.5               |
| Oxygen   | 3.5               |
| Hydrogen | 2.1               |

Use a labelled diagram to explain why methanol is soluble in water.

- Use displayed formulae showing one molecule of methanol and one molecule of water.
- Add partial charges  $\delta$ + and  $\delta$  to show the **two** most polar bonds in a methanol molecule and the polar bonds in a water molecule.
- Show all lone pairs.
- Label the most important intermolecular bond between the molecules.

6. The displayed formula for propanoic acid is shown below.

i. State the shape and bond angle around a carbon atom in the alkyl group of propanoic acid. Explain the shape.

| Shape       | <br> | <br> | <br> |     |
|-------------|------|------|------|-----|
| Bond angle  |      |      |      |     |
| Explanation |      |      |      |     |
|             | <br> | <br> | <br> |     |
|             |      |      |      |     |
| <br>        | <br> | <br> | <br> |     |
| <br>        | <br> | <br> | <br> |     |
| <br>        | <br> | <br> | <br> | [2] |

|    | ii. Suggest a value for the C–O–H bond angle in propanoic acid.                  |     |
|----|--|-----|
|    |  | [1] |
|    |  |     |
|    |  |     |
|    |  |     |
| 7. | Barium combines with oxygen, chlorine and nitrogen to form ionic compounds.      |     |
|    | Barium oxide, BaO, has a giant ionic lattice structure.                          |     |
|    | i. State what is meant by the term <i>ionic bond</i> .                           |     |
|    |  |     |
|    |  |     |
|    |  | [1] |
|    | ii. Draw a ' <i>dot-and-cross</i> ' diagram to show the bonding in barium oxide. |     |
|    | Show outer electrons only  |     |
|    |  |     |
|    |  |     |
|    |  |     |

iii. Calculate the number of barium ions in 1.50 g of barium oxide.Give your answer in standard form and to three significant figures.

number of barium ions = .....

**8(a).** At room temperature and pressure, the first four members of the alkanes are all gases but the first four alcohols are all liquids.

Explain this difference in terms of intermolecular forces.

\_\_\_\_\_

(b). The boiling points of 2-methylpropan-1-ol and butan-1-ol are shown below.

| Alcohol             | Boiling point /<br>°C |
|---------------------|-----------------------|
| 2-methylpropan-1-ol | 108                   |
| butan-1-ol          | 117                   |

Explain why the boiling points are different.

\_\_\_\_\_[2]

- 9. Nickel(II) nitrate, Ni(NO<sub>3</sub>)<sub>2</sub>, can be prepared by reacting nickel(II) oxide with dilute nitric acid.
  - i. Write the equation for this reaction.

ii. Ni(NO<sub>3</sub>)<sub>2</sub> contains the NO<sub>3</sub><sup>-</sup> ion. The nitrogen atom bonds to the oxygen atoms with a single covalent bond, a double covalent bond and a dative covalent bond, as shown below.

Draw the '*dot-and-cross*' diagramfor the  $NO_3^-$  ion, showing outer shell electrons only. Use a different symbol for the extra electron.

| 1 | - | ^ |  |
|---|---|---|--|
|   | 4 | 2 |  |

- **10.** Compounds of calcium have many uses.
  - i. Identify a compound of calcium that could be used to convert a soil pH from 5.8 to 7.5.
  - ii. Calcium phosphide, Ca<sub>3</sub>P<sub>2</sub>, is an ionic compound used in rat poison.

Calcium phosphide can be prepared by reacting calcium metal with phosphorus, P4.

\_\_\_\_\_[1]

Write the equation for the reaction of calcium with phosphorus to form calcium phosphide.

.....[1]

iii. Draw a '*dot-and-cross*' diagram to show the bonding in calcium phosphide, Ca<sub>3</sub>P<sub>2</sub>.Show **outer** electrons only.

[2]

11.i.Fluorine is the most electronegative element.<br/>Indicate any dipoles on the molecule of F2O below using partial charges.

ii. Suggest the **shape** of the F<sub>2</sub>O molecule and the F-O-F **bond angle**.

[1]

|     | Shape            |  |     |
|-----|------------------|--|-----|
|     | Bond a           | ingle  |     |
|     |                  |  | [1] |
|     | iii. What is     | s the oxidation number of oxygen in $F_2O$ ? |     |
|     | Include          | e the sign in your answer.                   |     |
|     |                  |  | [1] |
|     |                  |  |     |
|     |                  |  |     |
| 40  | This supption is |  |     |
| 12. | This question is | about halogens.                              |     |
|     | Solid chlorine a | nd solid bromine have a similar structure.   |     |
|     | Name this struc  | ture.  |     |
|     |                  |  | [1] |
|     |                  |  |     |

Draw a 'dot-and-cross' diagram to show the bonding in a nitrogen molecule.
 Show outer electrons only.

[1]

14 This question is about the properties and reactions of butan-2-ol.

Some properties of butan-2-ol are listed in the table.

| Melting point | −115 °C |
|---------------|---------|
| Boiling point | 99.5 °C |

The shape around the oxygen atom in butan-2-ol is non-linear.

Predict the C–O–H bond angle and explain this shape.

| bond angle  |     |
|-------------|-----|
| explanation |     |
|             |     |
|             |     |
|             |     |
|             |     |
|             | [4] |

**15.** The graph shows the melting points of the elements in Period 3 of the periodic table. 1800

Phosphorus and chlorine have simple molecular structures. More information about phosphorus and chlorine is given in the table below.

| Element    | Molecular formula |
|------------|-------------------|
| phosphorus | P <sub>4</sub>    |
| chlorine   | Cı2               |

Explain the differences in the melting points of phosphorus and chlorine.

------

| <br>    |
|---------|
| <br>[3] |

**16.** The table shows the boiling points of ammonia, fluorine and bromine.

|                          | Boiling point / °C |
|--------------------------|--------------------|
| ammonia, NH₃             | – 33               |
| fluorine, F <sub>2</sub> | - 188              |
| bromine, Br <sub>2</sub> | 59                 |

Explain the different boiling points of  $NH_3$ ,  $F_2$  and  $Br_2$ .

Include the names of any relevant forces and particles.

In your answer you should use appropriate technical terms, spelled correctly.

| [5] |
|-----|

- 17. Chlorine gas reacts with methane. One of the products is dichloromethane, CH<sub>2</sub>Cl<sub>2</sub>.
  - i. Chlorine is more electronegative than carbon and hydrogen, which have approximately equal electronegativity values.

Explain what is meant by the term *electronegativity*.

.....[2]

\_\_\_\_\_

ii. Draw a 3-D diagram of a molecule of  $CH_2CI_2$ .

Use partial charges to indicate polar bonds.

[2] iii. Explain why a CH<sub>2</sub>C/<sub>2</sub> molecule is polar.

**18(a).** Solid aluminium fluoride has a giant ionic lattice structure.

i. Describe what is meant by the term *ionic lattice*, in terms of the type and arrangement of particles present.

| <br> | <br> |
|------|------|
| <br> | <br> |
| <br> | <br> |
| <br> | [2]  |
|      |      |

ii. Draw a '*dot-and-cross*' diagram for aluminium fluoride.

Show outer electrons only.

| (b). | Solid boron tribromide has a simple molecular lattice structure. The atoms are held together by |
|------|---|
|      | covalent bonds.   |

i. What is meant by the term covalent bond?

ii. Draw a '*dot-and-cross*' diagram to show the bonding in a boron tribromide molecule. Show outer electrons only.
