Qualitative Analysis (MCQ)

1.	student adds aqueous sodium carbonate to one test-tube and aqueous silver nitrate to	а
	econd test-tube.	

The student adds dilute sulfuric acid to each test-tube.

Which row has the correct observations?

Your answer

	Aqueous sodium carbonate	Aqueous silver nitrate
Α	no change	precipitate
В	no change	no change
С	effervescence	no change
D	effervescence	precipitate

С	effervescence	no change
D	effervescence	precipitate
Your ansv	wer	[1]
Three qua	alitative tests are carried out on a solution of an unknow	n compound.
Test 1: O	n heating with NaOH(aq), a pungent smelling gas evolve	es which turns red litmus paper
Test 2: 0	n addition of AgNO₃(aq), a white precipitate forms which	n is soluble in dilute NH ₃ (aq).
Test 3 : O	n addition of Na ₂ CO ₃ (aq), there is no visible reaction.	
What is th	ne unknown compound?	
A. B. C. D.	ammonium bromide, NH ₄ Br ammonium chloride, NH ₄ Cl hydrochloric acid, HCl sodium chloride, NaCl	
Your ansv	wer	[1
HBr(aq), f	orms two ions in solution.	
Which ob	servation is correct for reactions of HBr(aq)?	
A. B. C. D.	It effervesces addition of sodium carbonate solution. It forms a white precipitate on addition of silver nitrate It turns orange on addition of silver nitrate solution. It turns brown on addition of potassium chloride solution	

4.	I wo tests are carried out on an aqueous solution of copper(ii) suitate, Cu5O4(aq).	
	Test 1: Addition of potassium iodide solution Test 2: Addition of barium chloride solution	
	Which of the following statements is / are true?	
	1: Test 1 produces an off-white precipitate and a brown solution.	
	2: Test 2 produces a white precipitate.	
	3: Test 1 and Test 2 are both redox reactions.	
	A. 1, 2 and 3 B. Only 1 and 2 C. Only 2 and 3 D. Only 1	[1]
5.	Which statement about ammonium carbonate is not correct?	
	 A It reacts with Ba(NO₃)₂(aq) to form a white precipitate. B It effervesces with dilute nitric acid. C It release an alkaline gas with warm NaOH(aq). D It has the formula NH₄CO₃. 	
	Your answer	[1]

Mark scheme – Qualitative Analysis (MCQ)

Question		on	Answer/Indicative content	Marks	Guidance
1			D	1	Examiner's Comments This question demonstrated a lack of practical skills with a many candidates unable to identify the false positive caused by the sulfate ion – the discriminator C was a common incorrect answer. This question proved to be the most difficult multiple choice question.
