

Mark scheme - Enthalpy

Question	Answer/Indicative content	Marks	Guidance
1	i 298 K/25°C AND 100 kPa ✓	1 (AO1.1)	<p>ALLOW 'a stated temperature' <i>To accept that other standard temperatures can be used and 298 should strictly be added as $\Delta H_{298 \theta}$</i></p> <p>ALLOW 1×10^5 Pa, 101 kPa, 1.01×10^5 Pa, 1 atm, 1 bar</p> <p>Examiner's Comments</p> <p>Only just over half of the candidates were able to quote standard conditions for enthalpy measurements. Errors included an incorrect temperature, often 273 and 293 K, or incorrect pressure (e.g. 1000 kPa, 100 atm). Candidates are reminded that 'room temperature' is not a standard temperature – a specific figure must be stated.</p>
	ii <p>FIRST, CHECK THE ANSWER ON ANSWER LINE IF answer = (+)90 (kJ mol⁻¹) award 3 marks IF answer = -90 (kJ mol⁻¹) award 2 marks IF answer = (+)360 (kJ mol⁻¹) award 2 marks</p> <p>-----</p> <p>Use of $\Delta_f H$ values and balancing numbers $\pm (4 \times -46)$ OR ± 184 AND $\pm (6 \times -242)$ OR ± 1452 seen anywhere ✓</p> <p>Correct subtraction using $\Delta H = -908$ $4 \times \Delta_f H(\text{NO})$ $= (4 \times -46) - (6 \times -242) - 908$ $= -184 + 1452 - 908$ $= (+)360$ (kJ mol⁻¹) ✓</p> <p>Calculation of $\Delta_f H(\text{NO})$ formation by $\div 4$</p> $\Delta_f H(\text{NO}) = \frac{360}{4} = (+)90$ (kJ mol ⁻¹) ✓	3 (AO2.6×3)	<p>FULL ANNOTATIONS MUST BE USED</p> <p>-----</p> <p>ALLOW ECF if common errors not seen</p> <p>IF ΔH of -908 has NOT been used, ONLY award 1st mark</p> <p>-----</p> <p>COMMON ERRORS</p> <p>1 mark Incorrect signs(s) AND missing $\div 4$</p> <p>± 2544 from $\pm (184 + 1452 + 908)$ ± 728 from $\pm (184 + 1452 - 908)$ ± 2176 from $\pm (-184 + 1452 + 908)$ -360 from $- (-184 + 1452 - 908)$</p> <p>2 marks Incorrect signs(s)</p> <p>± 636 from $\pm (184 + 1452 + 908)$ $= \pm 2544 \div 4$ ± 182 from $\pm (184 + 1452 - 908)$ $= \pm 728 \div 4$ ± 544 from $\pm (-184 + 1452 + 908)$ $= \pm 2176 \div 4$ -90 from $- (-184 + 1452 - 908)$ $= -360 \div 4$</p> <p>Examiner's Comments</p>

3.2.1 Enthalpy Changes

				<p>Exemplar 6</p> <p>Give your answer to a whole number. (A P-R = -909 J)</p> $4\text{NH}_3 \times 4 = (4 \times 4) = -160$ $P = -909 + (-160)$ $P = -1069$ $6 \times -242 = -1452$ $\text{H}_2\text{O} + \text{NO} = -1052$ $\text{NO} = -1052 - (-1452)$ $\text{NO} = 360$ <p>$\Delta_f H^\circ$ for $\text{NO}(\text{g}) = \dots\dots\dots 360 \dots\dots\dots \text{kJ mol}^{-1}$ [3]</p> <p>Most candidates were able to make some progress with the enthalpy calculation. Most recognised that the provided $\Delta_f H$ values had to be multiplied by the balancing numbers in the equation. Correct processing of these values with ΔH for the reaction discriminated well between candidates. The response shows a response that was given 2 out of the 3 available marks. The candidate has correctly calculated $+360 \text{ kJ mol}^{-1}$ from their enthalpy cycle but has not realised that this value is for 4 mol NH_3 and must be divided by 4 to obtain the enthalpy change of formation of 1 mol of NH_3. It was impressive that the correct answer of $+90 \text{ kJ mol}^{-1}$ was achieved by about one-third of candidates.</p>
		Total	4	
2	i	<p>FIRST, CHECK THE ANSWER ON ANSWER LINE IF $\Delta_r H = -457$ OR -458 (kJ mol^{-1}) award 4 marks IF $\Delta_r H = \pm 229$ OR 457 (kJ mol^{-1}) award 3 marks</p> <p>-----</p> <p>Energy released in J OR kJ $= 25.0 \times 4.18 \times 28.0 = 2926 \text{ (J) OR } 2.926 \text{ (kJ)} \checkmark$</p> <p>Correctly calculates $n(\text{AgNO}_3)$ $= 0.512 \times \frac{25.0}{1000} = 1.28 \times 10^{-2} \text{ (mol)} \checkmark$</p> <p>$\Delta H$ per mole AgNO_3 in kJ AND 3 SF Answer <i>MUST</i> divide energy by $n(\text{AgNO}_3)$</p> $\pm \frac{2.926}{1.28 \times 10^{-2}} = \pm 228.59375$ $= \pm 229 \text{ (kJ)} \checkmark$ <p>3 SF needed Sign NOT needed</p> <p>ΔH for 2 mol AgNO_3 AND – sign AND 3 SF $\Delta H_r = 2 \times -228.59375 = -457 \text{ (kJ mol}^{-1}\text{)}$ OR $2 \times -229 = -458 \text{ (kJ mol}^{-1}\text{)} \checkmark$</p>	4	<p>FULL ANNOTATIONS MUST BE USED</p> <p>-----</p> <p>ALLOW ECF throughout</p> <p>-----</p> <p>ALLOW 2930 J OR 2.93 kJ DO NOT ALLOW < 3 SF IGNORE any sign and units <i>i.e. ALLOW correctly calculated number in J OR kJ</i></p> <p>-----</p> <p>Alternative approach using 1 mol Mg</p> <p>Energy released = 2926 (J) OR 2.926 (kJ) \checkmark</p> $n(\text{AgNO}_3) = 1.28 \times 10^{-2} \text{ (mol)} \checkmark$ $n(\text{Mg}) = \frac{1.28 \times 10^{-2}}{2} = 6.4 \times 10^{-3} \text{ (mol)} \checkmark$ $\Delta H_r = \frac{2.926}{6.4 \times 10^{-3}} = -457 \text{ (kJ mol}^{-1}\text{)}$ <p>– sign AND 3 SF needed</p> <p>Examiner’s Comments</p>

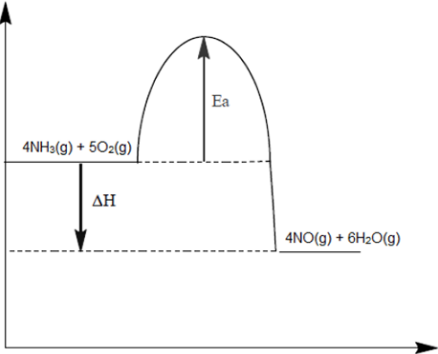

3.2.1 Enthalpy Changes

			<p>Candidates are well-versed with the relationship $q = mc\Delta T$ and most were able to calculate that 2.926 kJ of energy was released in this reaction. It was also common to see the amount of AgNO_3 correctly calculated as 1.28×10^{-3} mol. Candidates were expected to determine the amount of energy released from 1 mol AgNO_3 as 229 kJ and finally to multiply this value by 2 for the molar quantities in the equation to match the 'enthalpy change of reaction'. It was common to see -229 given as the final answer but this was rarely multiplied by 2. The question also required the final answer to be given to an appropriate number of significant figures. Many candidates seemed to be unaware that this reflects the least significant figure provided in the data, in this case 3 significant figures. The exemplar shows a typical response for 3 of the available 4 marks. Many omitted the negative sign in their ΔH value to consider the exothermicity of the reaction. Candidates are also advised to only round at the end of a multi-step calculation. Rounding of intermediate values introduces rounding errors in the final answer.</p> <p>Answer = -457 kJ mol^{-1}</p> <p>Exemplar 4</p> <p>(i) Calculate $\Delta_r H$, in kJ mol^{-1}, for the reaction shown in equation 23.1.</p> <p>Give your answer to an appropriate number of significant figures.</p> <p>Assume that the density and specific heat capacity, c, of the solution are the same as for water and that all the aqueous silver nitrate has reacted.</p> <p>$c = 4.18 \text{ J g}^{-1} \text{ K}^{-1}$ density = 1.00 g cm^{-3} $Q = mc\Delta T$</p> <p>$\Delta T = 28$</p> <p>$Q = 25 \times 4.18 \times 28$ $n = \frac{m}{M_r}$ $n = \frac{2.5}{1000} \times 0.512$</p> <p>$Q = 2926 \text{ J}$ $n = 0.0128$</p> <p>$Q = 2.926 \text{ kJ}$</p> <p>$\frac{2.926}{0.0128} = 228.60 \text{ kJ mol}^{-1}$ 228.59375</p> <p style="text-align: center;">✓ ✓ ✓</p> <p style="text-align: center;">$\Delta_r H = -229 \text{ kJ mol}^{-1}$ [4]</p>
	ii	<p>$\text{Ag}^+(\text{aq}) + \text{Cl}^-(\text{aq}) \rightarrow \text{AgCl}(\text{s})$ ✓</p> <p>State symbols required</p> <p>White precipitate AND $\text{AgNO}_3/\text{Ag}^+$ NOT ALL reacted</p> <p>OR</p> <p>NO white precipitate AND $\text{AgNO}_3/\text{Ag}^+$ ALL reacted ✓</p>	<p>ALLOW $\text{AgNO}_3(\text{aq}) + \text{NaCl}(\text{aq}) \rightarrow \text{AgCl}(\text{s}) + \text{NaNO}_3(\text{aq})$</p> <p>Observation needs to be linked to conclusion</p> <p>2</p> <p>Examiner's Comments</p> <p>Most candidates recognised that silver nitrate and chloride ions react together to form a white precipitate, but many did not make the link between this observation and whether any silver nitrate was left unreacted. Many</p>

3.2.1 Enthalpy Changes

					candidates did not give a correct equation, with missing or incorrect state symbols being common. This question discriminated extremely well.
			Total	6	
3	a		<p>FIRST CHECK ON ANSWER LINE If answer = (+) 431.5 (kJ mol⁻¹) award 2 marks If answer = -431.5 (kJ mol⁻¹) award 1 mark (wrong sign)</p> <hr/> <p>2 × H–C/ bond enthalpy correctly calculated</p> <p>= +436 +243 +184 = +863 (kJ mol⁻¹) ✓</p> <p>H–C/ bond enthalpy correctly calculated</p> <p>+863/2 = (+)431.5 (kJ mol⁻¹) ✓</p>	2	<p>ALLOW to 3 SF i.e. 432</p> <p>ALLOW 1 mark for (+)247.5 / 248 (wrong expression) i.e. (436+243–184)/2</p> <p><u>Examiner's Comments</u></p> <p>Most candidates made a good attempt at this question. The most common mistake was to use the wrong sign when incorporating the enthalpy change into the calculation, or not to incorporate it at all.</p>
	b	i	Br ₂ (l) → Br ₂ (g) ✓	1	<p><u>Examiner's Comments</u></p> <p>A good attempt by many candidates but some lost marks by having the wrong state of bromine, even though the question stated it was a liquid changing to a gas. Many added water or oxygen, some confused the equation with bond enthalpy and answers such as Br₂(l) → 2Br(g) were commonly seen.</p>
		ii	<p>Endothermic AND Energy required to overcome induced dipole–dipole forces/London forces ✓</p>	1	<p>Mark independently of 3 (d) (i)</p> <p>ALLOW endo to break intermolecular forces/bonds ALLOW bonds between molecules</p> <p>DO NOT ALLOW van der Waals' forces</p> <p><u>Examiner's Comments</u></p> <p>The majority of candidates answered this question incorrectly. Only 10% of candidates mentioned intermolecular/London forces. Most stated 'exothermic' or described breaking covalent bonds.</p>
			Total	4	

3.2.1 Enthalpy Changes

4	i	 <p>Reactants, products and E_a Reactants on LHS $4\text{NH}_3(\text{g}) + 5\text{O}_2(\text{g})$ AND Products on RHS $4\text{NO}(\text{g}) + 6\text{H}_2\text{O}(\text{g})$ AND Activation energy correctly labelled / E_a ✓</p> <p>ΔH ΔH labelled with product below reactant AND Arrow downwards ✓</p>	<p>ANNOTATE ANSWER WITH TICKS AND CROSSES ETC</p> <p>IGNORE state symbols</p> <p>ALLOW 1 mark for a correctly labelled endothermic diagram</p> <p>ALLOW no arrowhead or arrowheads at both end of E_a line.</p> <p>E_a E_a line must reach maximum (or near to maximum) on curve</p> <p>For E_a, ALLOW AE OR A_E DO NOT ALLOW $-\Delta H$ DO NOT ALLOW double headed arrow on ΔH</p> <p>ΔH ALLOW ΔH arrow even with small gap at the top and bottom, i.e. line does not quite reach reactant or product line.</p> <p>ALLOW -905 for ΔH</p> <p><u>Examiner's Comments</u></p> <p>Most candidates were able to gain the first mark, but many lost the second mark by putting a double headed arrow or $-\Delta H$.</p>
	ii	<p>FIRST CHECK ON ANSWER LINE If answer = 6.79×10^7 (kJ) award 4 marks If answer = 2.72×10^8 (kJ) award 3 marks (no ÷ 4)</p> <hr/> <p>$n(\text{NH}_3)$ $= \frac{5.1 \times 10^6}{17} = 3.00 \times 10^5$ (mol) ✓</p> <p>Stoichiometry and ΔH</p> <p>1 mol NH_3 releases $\frac{905}{4}$ OR 226.25 (kJ) ✓</p> <p>Energy released</p> <p>$(3.00 \times 10^5) \times \frac{905}{4}$ OR 67875000 (kJ) ✓</p> <p>Final answer to 3SF AND standard form</p>	<p>IGNORE (-) SIGN Throughout: IGNORE trailing zeroes in intermediate working, e.g. For $n(\text{NH}_3)$ ALLOW 3×10^5 for 3.00×10^5</p> <hr/> <p>–</p> <p>ALLOW ECF from incorrect $n(\text{NH}_3)$ OR 905/4</p> <p>ALLOW 3 SF up to calc value correctly rounded. Value will depend on intermediate rounding</p> <p>Common Errors</p>

3.2.1 Enthalpy Changes

		$= 6.79 \times 10^7 \text{ (kJ)} \checkmark$ <i>standard form AND 3 SF required</i>		1.09×10^9 ($\times 4$ instead of $\div 4$) 3 marks 2.72×10^8 (no $\div 4$) 3 marks 6.79×10^1 (no tonnes \rightarrow g) 3 marks Examiner's Comments Most candidates were able to convert from tonnes to moles and then went on to complete the majority of the calculation steps. Many omitted to divide by 4 and were credited 3 marks. Some candidates lost marks by not stating the answer to standard form or quoted their answer to more than 3 significant figures. A number of candidates attempted to use $Q = mc\Delta T$ and did not get very far in the calculation.
		Total	6	
5	i	(because energy is needed to break) induced dipole–dipole interactions / London forces between molecules (1)	1	allow forces of attraction between molecules OR van der Waals' forces ignore reference to strong or weak
	ii	Bond breaking $(+193) + (+151) = (+)344$ AND Bond making $2(-175) = (-)350$ (1) $\Delta_r H = \frac{(+344) + (-350)}{2} = -3 \text{ (kJ mol}^{-1}\text{)}_{(1)}$	2	Correct answer scores 2 marks
		Total	3	
6	i	More energy is released by forming bonds than energy required when breaking bonds ✓	1	ORA Response needs link between energy, breaking and making bonds ALLOW 'bond breaking is endothermic' AND 'bond making is exothermic' ALLOW within labelled energy diagram Examiner's Comments Able candidates provided well- constructed and structured responses, which demonstrated their clear understanding of this key concept. Weaker candidates often responded in terms of bond making requiring energy and that breaking bonds releasing energy. Many responses referred to more bonds instead of more energy.
	ii	FIRST, CHECK THE ANSWER ON ANSWER LINE IF bond enthalpy = (+)612 (kJ mol⁻¹) award 3 marks IF bond enthalpy = (-)316 (kJ mol⁻¹) award 2 marks	3	FULL ANNOTATIONS MUST BE USED -----

3.2.1 Enthalpy Changes

		<p><i>Energy for bonds made (4 × C=O + 4 × O–H)</i></p> <p>4 × 805 + 4 × 464 OR 3220 + 1856 OR 5076 (kJ) ✓</p> <p><i>Energy for bonds broken (4 × C–H + 3 × O=O)</i></p> <p>4 × 413 + 3 × 498 OR 1652 + 1494 OR 3146 (kJ) ✓</p> <p><i>C=C bond enthalpy correctly calculated</i></p> <p>C=C bond enthalpy = -1318 - 3146 + 5076 = (+)612 kJ mol⁻¹ ✓ <i>Mark is for answer</i></p>		<p>IGNORE sign</p> <p>IGNORE sign</p> <p>-----</p> <p>ALLOW ECF DO NOT ALLOW – sign</p> <p>COMMON ERRORS</p> <p>+ 2106 omission of 3O=O 2 marks -3248 -1318 + 3146 - 5076 2 marks</p> <p>Examiner’s Comments This question tested both chemical and mathematical ability. Two marks were available for calculating the energies involved in bond making and bond breaking. Many candidates miscounted the number of bonds involved in the calculation, especially for 3 × O=O and 4 × O–H. Candidates can avoid this error by drawing out each molecule and counting the bonds being broken and made. In calculating the bond enthalpy, weaker candidates often omitted the enthalpy change of reaction, -1318 kJ mol⁻¹, instead simply subtracting the energies already calculated for bonds broken and bonds made. Answer: 612 kJ mol⁻¹</p>
		Total	4	
7	a	<p>FIRST, CHECK THE ANSWER ON ANSWER LINE IF enthalpy change = -3919.5 (kJ mol⁻¹) award 3 marks IF enthalpy change</p>	3	<p>ANNOTATE ANSWER WITH TICKS AND CROSSES ETC IF there is an alternative answer, check to see if there is any ECF credit possible</p>

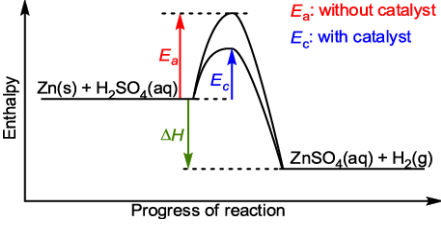

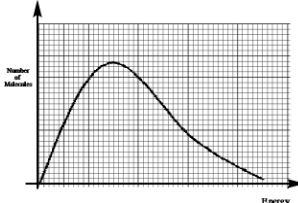

3.2.1 Enthalpy Changes

	<p>= (+)3919.5 (kJ mol⁻¹) award 2 marks</p> <p>.....</p> <p><i>Working for CO₂ AND H₂O seen anywhere (1 mark)</i> 6 × (-)393.5 AND 6 × (-)285.8 OR (-)2361 AND (-)1714.8 OR (-)4075.8 ✓</p> <p><i>Calculates Δ_cH</i> A further 2 marks for correct answer AND correct sign</p> <p>= (6 × -393.5) + (6 × -285.8) - (-156.3)</p> <p>= -3919.5 (kJ mol⁻¹) ✓ ✓</p>	<p>ALLOW 3 marks for Δ_cH = -3920 FINAL answer rounded to 3 SF</p> <p>Common incorrect answers are shown below ALLOW 2 marks for Δ_cH = -3924 <i>From Δ_cH = (6 × -394 + 6 × -286) - (-156)</i></p> <p><i>Data rounded to 3 sig figs</i> ALLOW 2 marks for Δ_cH = -4232.1 <i>All data added together</i> (6 × -393.5) + (6 × -285.8) + (-156.3)</p> <p>ALLOW 1 mark for Δ_cH = (+)4232.1</p> <p>Examiner's Comment:</p> <p>This calculation was generally well answered but there were a variety of errors that could lead to candidates scoring just one or two marks. These included incorrect signs associated with the data during the calculation, adding all the data together or missing out the sign associated with the final answer.</p>
b i	<p>FIRST, CHECK THE ANSWER ON ANSWER LINE IF answer = -2510 (kJ mol⁻¹) award 4 marks IF answer = 2508 / 2507 (kJ mol⁻¹) award 3 marks <i>(not rounded to 3SF, ignore sign)</i> IF answer = + 2510 (kJ mol⁻¹) award 3 marks <i>(incorrect sign)</i> IF answer = -2510000 (kJ mol⁻¹) award 3 marks <i>(used J instead of kJ)</i></p> <p>.....</p> <p><i>Moles</i> n(C₆H₁₄) = 0.0150 mol ✓</p> <p><i>Energy</i> q calculated correctly = 37620 (J) OR 37.620 (kJ) ✓</p>	<p>4</p> <p>ANNOTATE ANSWER WITH TICKS AND CROSSES ETC</p> <p>moles = 1.29/86.0 IGNORE trailing zeros</p>

3.2.1 Enthalpy Changes

		<p><i>Calculating ΔH</i> Correctly calculates ΔH in kJ mol^{-1} AND to 3 or more SF ✓</p> <p><i>Rounding AND sign</i> calculated value of ΔH rounded to 3 SF AND '-' sign ✓</p>		<p>$q = 200 \times 4.18 \times 45.0$ ALLOW correctly rounded to 3 sig figs: 37.6 kJ</p> <p>ALLOW ECF from incorrect q</p> <p>ALLOW ECF from incorrect molar mass or incorrect moles of hexane to 3 SF or more correctly rounded</p> <p>IGNORE sign at this intermediate stage IGNORE working $\Delta H = 37.62/0.015 = 2508 \text{ (kJ mol}^{-1}\text{)}$ $\Delta H = 37.6/0.015 = 2507 \text{ (kJ mol}^{-1}\text{)}$</p> <p>$\Delta H = -2510 \text{ (kJ mol}^{-1}\text{)}$ Final answer must have '-' sign and 3 SF</p> <p>Examiner's Comments</p> <p>A high proportion of candidates lost marks on this question for a variety of reasons including errors in the calculation of moles and / or energy change. Many candidates did not express their final answer to three significant figures and so failed to score the final mark. An incorrect or missing sign also resulted in loss of the final mark.</p>
	ii	<p>Any two from the following: ✓ ✓</p> <ul style="list-style-type: none"> • Heat released to the surroundings • Incomplete combustion • Non-standard conditions 	3	<p>ALLOW heat loss</p> <p>ALLOW incomplete reaction OR not everything burns</p> <p>IGNORE reference to evaporation</p> <p>Examiner's Comment:</p> <p>Almost all candidates scored at least one mark for this well-rehearsed practical question. There was some confusion regarding the use of average bond enthalpy values obtained from a data book which was not relevant to this question.</p>
		Total	9	

3.2.1 Enthalpy Changes

8	i	 <p>Zn and H₂SO₄ on LHS AND ZnSO₄ + H₂ on RHS ✓</p> <p>ΔH labelled with product below reactant AND arrow downwards ✓</p> <p>E_a AND E_c correctly labelled with E_c below E_a ✓</p>	3	<p>ANNOTATE ANSWER WITH TICKS AND CROSSES</p> <p>IGNORE state symbols.</p> <p>ΔH: DO NOT ALLOW -ΔH ALLOW this arrow even if it has a small gap at the top and bottom i.e. does not quite reach reactant or product line</p> <p>E_a: ALLOW no arrowhead or arrowheads at both ends of activation energy line The E_a line must point to maximum (or near to the maximum) on the curve OR span approximately 80% of the distance between reactants and maximum regardless of position ALLOW AE or A_E for E_a</p> <p>Examiner's Comments</p> <p>Many candidates are well-prepared for this type of question however there are still some issues regarding the use of double headed arrows to indicate an enthalpy change. Whilst allowed by the examiners for showing activation energies, a correct single headed arrow was required to illustrate ΔH. A small proportion of candidates omitted hydrogen as a product, despite it being stated in the question.</p>
	ii	 <p>Correct drawing of a Boltzmann distribution curve ✓</p> <p>Axes labelled y axis: (number of) molecules AND x axis: (kinetic) energy ✓</p>	4	<p>ANNOTATE ANSWER WITH TICKS AND CROSSES</p> <p>Curve must start at origin. The limit of acceptability is that the curve must start within the first small square nearest the origin.</p> <p>Curve must not touch the x-axis at higher energy</p> <p>IGNORE a slight inflexion on the curve</p>

3.2.1 Enthalpy Changes

		<p>Catalyst lowers the activation energy (by providing an alternative route) ✓</p> <p>QWC - (With a catalyst a) greater proportion of molecules with energy greater than activation energy OR (With a catalyst a) greater proportion of molecules with energy equal to the activation energy OR (With a catalyst there is a) greater area under curve above the activation energy ✓</p>		<p>DO NOT ALLOW two curves DO NOT ALLOW a curve that bends up at the end by more than one small square</p> <p>ALLOW particles instead of molecules on y axis DO NOT ALLOW enthalpy for x-axis label DO NOT ALLOW atoms instead of particles or molecules ALLOW ECF for the subsequent use of atoms (instead of molecules or particles)</p> <p>ALLOW annotations on Boltzmann distribution diagram</p> <p>QWC requires more molecules have / exceed activation energy / E_a. IGNORE more molecules have enough energy to react for the QWC mark (as not linked to E_a) ORA if states the effect with no catalyst</p> <p>IGNORE (more) successful collisions</p> <p>Examiner's Comments</p> <p>Candidates are very familiar with the Boltzmann distribution curve and there were many examples of excellent diagrams. The majority of candidates scored maximum marks in this part. Failure to identify that more molecules have an energy greater than the activation energy when a catalyst is used, was a common reason why only three marks were scored.</p>
		Total	7	
9	a	i	4	<p>ANNOTATE ANSWER WITH TICKS AND CROSSES</p> <p>IF $\Delta H_r = -347$ (kJ mol⁻¹) award 4 marks IF $\Delta H_r = (+)347$ (kJ mol⁻¹) award 3 marks (incorrect sign) </p> <p>Moles Amount, $n(\text{CuSO}_4)$, calculated correctly = 0.0125 (mol) ✓</p> <p>Energy q calculated correctly = 4336.75 (J) OR 4.33675 (kJ) ✓</p> <p>Note: $q = 25.0 \times 4.18 \times 41.5$</p> <p>ALLOW 3 SF up to calculator value of 4336.75</p>

3.2.1 Enthalpy Changes

		<p>Calculating ΔH correctly calculates ΔH in kJ mol^{-1} to 3 or more sig figs ✓</p> <p>Rounding and Sign calculated value of ΔH rounded to 3 sig. fig. with minus sign ✓</p>		<p>J</p> <p>IGNORE sign IGNORE working</p> <p>Note: from 4336.75 J and 0.0125 mol $\Delta H = (-)$346.940 kJ mol^{-1} IGNORE sign at this intermediate stage ALLOW ECF from $n(\text{CuSO}_4)$ and / or energy released</p> <p>Final answer must have correct sign and three sig figs</p> <p>Answer is still -347 from rounding of q to 4340 J</p> <p>Examiner's Comments</p> <p>Almost all candidates recognised the first step of this unstructured calculation was to use the $mc \Delta T$ expression to determine the energy change. The majority of the cohort subsequently divided this by the moles of CuSO_4 to obtain a value for ΔH_r. A significant proportion of responses did not include a sign for the enthalpy change and so only scored three marks. A small number of candidates gave incomplete responses, often rounding the energy change to three significant figures, rather than processing it further.</p> <p>Answer: -347 kJ mol^{-1}</p>
	ii	Minimum mass = $0.0125 \times 24.3 \times 1.25 = 0.38(0) \text{ g}$ ✓	3	<p>ALLOW ECF for mass correctly rounded to 2 dp from incorrect moles of CuSO_4 in 3(a)(i)</p> <p>Examiner's Comments</p> <p>The majority of candidates were able to link the moles of CuSO_4 with the balanced equation to determine the moles of Mg reacting and hence suggest a mass. However, only the strongest candidates were able to scale the quantity required to take into account the excess.</p>
b	i	(enthalpy change that occurs) when one mole of a substance ✓	3	<p>ALLOW energy required OR energy released ALLOW one mole of a compound OR one mole of an element</p> <p>ALLOW combusts in excess oxygen</p>

3.2.1 Enthalpy Changes

		<p>completely combusts OR reacts fully with oxygen ✓</p> <p>298 K / 25 °C AND 1 atm / 100 kPa / 101 kPa / 10⁵ Pa / 1 bar ✓</p>		<p>ALLOW burns in excess oxygen Combusts in excess air is not sufficient</p> <p>IGNORE reference to concentration</p> <p>Examiner's Comments</p> <p>This definition is well known by candidates and the majority scored all three marks. A significant proportion of the cohort only scored two as the standard conditions were often omitted. Candidates should be encouraged to read questions carefully to ensure they include all the required information in their responses.</p>
	ii	<p>IF answer = -281 (kJ mol⁻¹), award 2 marks IF answer = (+)281 (kJ mol⁻¹), award 1 mark</p> <p>Working for C AND H₂ seen anywhere</p> <p>9 × (-)394 AND 10 × (-)286 OR (-)3546 AND (-)2860 OR (-)6406 ✓</p> <p>Calculates ΔH_c correctly</p> <p>-6406 - -6125 = -281 kJ mol⁻¹ ✓</p>	2	<p>ANNOTATE ANSWER WITH TICKS AND CROSSES</p> <p>IF there is an alternative answer, check to see if there is any ECF credit possible</p> <p>Common incorrect answers are shown below Award 1 mark for 5445 (not used × 9 and × 10) 2871 (not used × 9) 2293 (not used × 10)</p> <p>Examiner's Comments</p> <p>In general candidates approached this calculation confidently and applied Hess' law accurately. Some candidates failed to take into account the mole ratios, but subsequently processed their values correctly. Consequently the majority of candidates scored one or two marks.</p> <p>Answer: -281 kJ mol⁻¹</p>
	c i	<p>(Average enthalpy change) when one mole of bonds ✓ of (gaseous covalent) bonds is broken ✓</p>	2	<p>IGNORE energy required OR energy released</p> <p>DO NOT ALLOW bonds formed</p> <p>IGNORE heterolytic / homolytic</p> <p>Examiner's Comments</p> <p>Most candidates were able to recall that bond enthalpy referred to the energy change occurring when bonds are broken, but weaker responses included contradictions by also mentioning bond formation. The strongest candidates were able to state that bond enthalpy referred to one mole of bonds but a significant proportion of candidates incorrectly</p>

3.2.1 Enthalpy Changes

				referred to one mole of molecules or made no reference to this quantity.
				<p>ANNOTATE ANSWER WITH TICKS AND CROSSES</p> <p>IGNORE sign</p> <p>IGNORE sign</p> <p>ALLOW ECF</p> <p>IGNORE rounding of 1062 to 1060 and credit 1062 from working</p> <p>Award 2 marks for ± 1272 (from $\pm(2580 - 1308)$) ± 1482 (from $\pm(2580 - 1308 + 210)$)</p> <p>Examiner's Comments</p> <p>Almost all candidates were able to process the bond enthalpy data and mole ratios to arrive at values for the energy required to break bonds in the reactants and the energy released by the formation of H–H bonds in the products. The most able candidates processed these values alongside the enthalpy change provided in the question to arrive at the correct answer. Common incorrect responses included $+1482 \text{ kJ mol}^{-1}$ and $+1272 \text{ kJ mol}^{-1}$, the latter of which was caused by failure to use the ΔH value provided.</p> <p>Answer: $+1062 \text{ kJ mol}^{-1}$.</p>
		ii	<p>IF answer = (+)1062 (kJ mol⁻¹), award 3 marks IF answer = -1062 (kJ mol⁻¹), award 2 marks </p> <p>(ΔH for bonds broken =) 2580 (kJ mol⁻¹) OR 1652 AND 928 (kJ mol⁻¹) ✓</p> <p>(ΔH for bonds formed =) 1308 (kJ mol⁻¹) ✓</p> <p>(bond enthalpy CO = $2580 - 1308 - 210$) = (+)1062 (kJ mol⁻¹) ✓</p>	3

Errors related to use of an incorrect mole ratio, applying 10% incorrectly, or ignoring 10% altogether.</p> <p>Answer: 3.30 mol dm⁻³</p>
		Total	7	
1 1	i	More energy is required for bond breaking than is released by bond making ✓	1	

3.2.1 Enthalpy Changes

				<p>Examiner's Comments</p> <p>The poor quality of answers observed surprised the Examiners as this question had featured a number of times on legacy papers which would have been used in Centres to prepare candidates for this examination. Many candidates were not able to explain that bond breaking requires energy whereas bond making produces energy. For the reaction to be endothermic more energy is required to break bonds than is evolved when bonds are formed. In their answers candidates frequently stated that both processes required energy or that more bonds were broken than were formed.</p>
		ii	<p>Enthalpy profile diagram</p> <ul style="list-style-type: none"> • ΔH labelled OR 82 on vertical arrow • Products above reactants (either chemical symbols or the words products and reactants) • Arrow upwards ✓ <p>Formulae AND state symbols $\text{N}_2(\text{g}) + \frac{1}{2}\text{O}_2(\text{g}) \rightarrow \text{N}_2\text{O}(\text{g})$ ✓</p>	<p>2</p>  <p>IGNORE activation energy</p> <p>DO NOT ALLOW multiples of equation: 1 mole of N_2O is formed</p> <p>Examiner's Comments</p> <p>Half of the candidates scored zero for this question, many failing to label the enthalpy change or to show this as an arrow pointing upwards. Although the question stated that the activation energy was not required, candidates frequently included it in their diagrams and then labelled it ΔH. Many Candidates did not write the formula of the reactants or products and those who did multiplied the species by two so as the diagram did not represent the enthalpy of formation.</p>

The most common approach adopted by candidates was to use the ΔH_f data given in the table and the stoichiometry ratios from the equation to calculate the difference between the reactants and products, $-2497 \text{ kJ mol}^{-1}$. This value was then subtracted from the enthalpy change of the reaction to give $+270 \text{ kJ mol}^{-1}$. The strongest candidates recognised the need to divide this by three to obtain the enthalpy change of formation of NO.</p> <p>Some candidates carried out their subtractions in the intermediate stages incorrectly and consequently arrived at a value of -90 kJ mol^{-1}. This response received two marks.</p> <p>Error carried forward credit was awarded to candidates who incorrectly processed ΔH_f data, stoichiometric ratios and the enthalpy change of the reaction provided their final answer was divided by three. Consequently the majority of candidates scored at least one mark in this question.</p>
		Total	12	
1 5	a	<p>$(+)182 \checkmark$</p>	1	<p>This is the ONLY acceptable answer</p> <p>Examiner's Comments</p> <p>Most candidates were able to correctly process the E_a and ΔH values provided to calculate the activation energy of the reverse reaction. Some candidates subtracted ΔH from the E_a value to give an answer of 164 kJ mol^{-1}. Other candidates reversed the sign of the activation energy provided to give -173 kJ mol^{-1}.</p>
	b	<p>Look at answer if +63 kJ AWARD 2 marks if 63 (no sign) OR-63 (incorrect sign) AWARD 1 mark</p> <p>No of moles of HI = 14 moles \checkmark</p>	2	<p>ALLOW one mark for +126 kJ</p> <p>Sign and value required.</p> <p>ALLOW ECF from incorrect number of moles</p>

3.2.1 Enthalpy Changes

		Enthalpy Change = +63 kJ ✓		<p>of HI</p> <p>Examiner's Comments</p> <p>Many candidates were able to tackle the first part of this question confidently to obtain the correct value for the moles of hydrogen iodide that decomposed. The second marking point proved more difficult, and candidates were expected to scale the enthalpy change given, in addition to providing the correct sign for this process, which is the reverse reaction of the equilibrium shown. The very best candidates were able to achieve the second mark. Common errors included incorrect scaling, to give the enthalpy change as +126 kJ mol⁻¹, or showing the incorrect sign, -63 kJ mol⁻¹ or not providing the sign, 63 kJ mol⁻¹.</p>
	c	<p>Look at answer if (+)298 AWARD 2 marks If answer is -298 AWARD 1 mark (incorrect sign)</p> <p>2 x H-I bond enthalpy correctly calculated (436 +151-(-9) =) (+)596 ✓</p> <p>H-I bond enthalpy correctly calculated (Bond energy for H-I $\frac{(+596)}{2}$ =) (+)298 kJ mol⁻¹ ✓</p>	2	<p>ALLOW 1 mark for (+)293.5 kJ mol⁻¹ (bonds broken divided by 2)</p> <p>ALLOW 1 mark for (+)289 kJ mol⁻¹ (incorrect expression i.e. $\frac{436 + 151 + (-9)}{2}$)</p> <p>Examiner's Comments</p> <p>This question required candidates to process the bond enthalpy data and value for ΔH to obtain a value of the bond enthalpy of H—I. In general the responses were much better than for a similar question asked in the January 2012 session and most candidates were able to score at least one mark. The most common error was a failure to divide by two, resulting in an answer of +596 kJ mol⁻¹. Another common incorrect response included the incorrect subtraction of ΔH from the bond enthalpy to give a value of +289 kJ mol⁻¹. Some candidates neglected to use ΔH and arrived at a value of +293.5 kJ mol⁻¹. All these responses received one mark.</p> <p>This question discriminated well and the most able candidates scored both marks.</p>
	d	There are 3 marking points required for 2 marks	2	ANNOTATE ANSWER WITH TICKS AND CROSSES ETC
