2	<p><b>FIRST CHECK THE ANSWER IN ON ANSWER LINE</b>  <b>If answer = (+)156 (J K<sup>-1</sup> mol<sup>-1</sup>) award 4 marks</b></p> <p>-----</p> <p>Part 1: Calc of <math>\Delta_r S</math></p> <p><b>Use of 298 K</b> (seen anywhere) <b>1 mark</b> <math>\checkmark</math></p> <ul style="list-style-type: none"> <li>e.g. <math>-16.1 = -55.8 - 298 \times \Delta S</math></li> </ul> <p>-----</p> <p><b>CORRECT</b> use of Gibbs' equation <b>1 mark</b></p> <ul style="list-style-type: none"> <li>using candidate's temperature (e.g. 298)</li> <li>with <math>-16.1</math> <b>AND</b> <math>-55.8</math></li> <li>to calculate <math>\Delta S</math> in <i>kJ</i> <b>OR</b> <i>J</i> <math>\checkmark</math></li> </ul>	<p>4 AO2.4× 4</p>	<p>Using 298 K, <math>\Delta S = \frac{-55.8 - (-16.1)}{298} = \frac{-39.7}{298}</math>  <math>= -0.133\dots(\text{kJ K}^{-1}\text{mol}^{-1})</math></p> <p><b>OR</b> <math>-133\dots \text{ (J K}^{-1}\text{mol}^{-1})</math>  <b>Sign required IGNORE units</b></p> <p>Calculator:  <math>-0.133221 \text{ (kJ K}^{-1} \text{ mol}^{-1})</math>  <math>-133.221 \text{ (J K}^{-1} \text{ mol}^{-1})</math>  <b>ALLOW ECF</b> from incorrect temperature.</p> <p>-----</p> <p>Using <math>-133</math>:  <math>S(\text{Na}_2\text{S}_2\text{O}_3) = 372.4 - 349.5 - (-133)</math>  <math>= 22.9 + 133</math>  <math>= (+)156 \text{ (J K}^{-1} \text{ mol}^{-1})</math>  <b>3 SF</b> required</p>

## 5.2.2 Enthalpy and Entropy

	<p>-----</p> <p><b>Part 2: Calc of S(Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub>)</b> <span style="float: right;"><b>1 mark</b></span></p> <p><b>CORRECT</b> use of standard S data in question ✓</p> <p>Seen anywhere (could be within an expression) e.g.</p> <ul style="list-style-type: none"> <li>• <math>372.4 - [ S(\text{Na}_2\text{S}_2\text{O}_3) + (5 \times 69.9) ]</math></li> <li>• OR <math>372.4 - (5 \times 69.9)</math></li> <li>• OR <math>372.4 - 349.5</math></li> <li>• OR 22.9</li> </ul> <p><b>IGNORE</b> sign, i.e. <b>ALLOW</b> -22.9, etc</p> <hr/> <p><b>CORRECT</b> calculation of S(Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub>) using candidate's calculated <math>\Delta S</math> in Part 1 <b>to 3 SF</b></p> <p style="text-align: right;"><b>1 mark</b> ✓</p>	<p><b>ALLOW ECF</b> from incorrect <math>\Delta_r S</math> (Part 1)</p> <p><b><u>Examiner's Comments</u></b></p> <p>This was a testing question. This question discriminated very well but lower ability candidates struggled to score marks.</p> <p>This unfamiliar scenario required candidates to first decide on a strategy for solving the problem. Candidates needed to use the Gibbs' equation and supplied data to determine the entropy change. They then needed to combine this value with other supplied data to determine the unknown standard entropy. The data provided were all standard, signified by the standard sign.</p> <p>Candidates were expected to use 298 K as the standard temperature to first determine the entropy change. Although many candidates chose 298 K, many different temperatures were seen, with 273 K and 286.5 K (the temperature change in 5a(i)) being common. Some candidates were obviously thrown by the absence of a stated temperature and many omitted T from their Gibbs' equation, using <math>\Delta G = \Delta H - \Delta S</math> instead.</p> <p>This calculated value for <math>\Delta S</math> (correct: -0.133 kJ) then needed to be combined with the supplied entropy data to determine the unknown standard entropy (correct: 156 J) to three significant figures. ECF could be applied during marking but this second calculation first required a unit conversion from kJ to J. Many candidates did not make this conversion. Some candidates made errors combining this information, e.g. incorrect signs, adding rather than subtracting and no unit conversions. Finally, some candidates, successful in their calculation, did not follow the instruction to quote their answer to three significant figures.</p> <p>Exemplar 5 shows a very clear response. The candidate has used the Gibbs' equation to determine <math>\Delta S</math> first in kJ and then, in preparation for the second part of the determination, in J. The <math>\Delta S</math> value is combined with the supplied entropy data to obtain the unknown entropy change, shown by 'x' in the response. This calculated value is then rounded to the required three significant figures.</p> <p><b>Exemplar 5</b></p>

Many weak candidates used –164, rather than –0.164, in the expression, resulting in a positive value for <math>\Delta G</math>. A few used 25 °C instead of 298 K. Candidates are far more adept with this calculation that used to be the case.</p> <p>The comment on feasibility was marked dependent on the sign obtained for <math>\Delta G</math>.</p> <p>Answer: <math>\Delta G = -185 \text{ kJ mol}^{-1}</math></p>
	i v	$(\Delta G =) -234 - 1427 \times \frac{-164}{1000} = 0 \text{ (calculator 0.028(kJ) OR 28 (J)}$ <p><b>2<sup>nd</sup> mark only available if 1<sup>st</sup> mark has been awarded</b></p> <p>(Above 1427K / 1154°C), reaction is <b>not</b> feasible / <b>not</b> spontaneous <math>\checkmark</math> <b>OR</b> 1427 K is maximum temperature that reaction happens</p>	2	<p><b>ALLOW</b> (When <math>\Delta G = 0</math>)</p> $T = \frac{-234}{-0.164} = 1427 \text{ K OR } \frac{-234000}{-164} = 1427 \text{ K}$ <p>For 2nd mark, <b>IF</b> <math>\Delta G</math> is +ve from (iii) <b>ALLOW ECF</b> for: Above 1427 K, reaction is feasible / spontaneous <b>OR</b> 1427 K is minimum temperature that reaction happens</p> <p><b>IGNORE LESS</b> feasible</p> <p><b>IGNORE</b> comparisons of the signs of <math>T\Delta S</math> and <math>\Delta H</math>, e.g <b>IGNORE <math>T\Delta S</math> is more negative than <math>\Delta H</math></b></p> <p><b>Examiner's Comments</b></p> <p>Although answered well, this part discriminated well. Two strategies were seen. The first and more common repeated the <math>\Delta G</math> calculation from (iii) to show that <math>\Delta G</math> was just positive (0.028 kJ mol<sup>-1</sup>) and hence that the reaction was now not feasible. The second strategy showed that</p>

## 5.2.2 Enthalpy and Entropy

					1427K and therefore 1154°C is the temperature at which $\Delta G$ has a value of 0 kJ mol <sup>-1</sup> . Although most candidates were successful here, many weaker candidates seemed unaware of what to do. It was then common to see random numbers being used and °C, instead of K, in the $\Delta G$ expression (much more common than in (iii)). The best candidates also identified that the reaction becomes unfeasible above 1147°C. The explanation was marked consequentially of the sign obtained in (iii).
			<b>Total</b>	<b>8</b>	
8	a	i	(entropy) decreases <b>AND</b> (solid / ice has) less disorder / more order / fewer ways of arranging energy / less freedom / less random molecules ✓	1	<b>ORA decreases and reason required for mark</b>  <b>ASSUME change is for freezing of water unless otherwise stated</b>  <b>DO NOT ALLOW</b> atoms are more ordered  <b>Examiner's Comments</b>  This part was usually answered, the best responses linking the state change from liquid to solid with increased order and a decrease in entropy.
		ii	(entropy) increases <b>AND</b> (CO <sub>2</sub> ) <b>gas is formed</b> ✓ <i>Could be from equation with CO<sub>2</sub>(g)</i>	1	<b>increases and reason required for mark</b>  <b>ASSUME</b> gas is CO <sub>2</sub> unless otherwise stated <b>BUT DO NOT ALLOW</b> an incorrect gas (e.g. H <sub>2</sub> )  <b>ALLOW</b> more gas  <b>Examiner's Comments</b>  Candidates were expected to predict an increase in entropy from formation of a gas (CO <sub>2</sub> ). This was communicated either in text or as an equation with state symbols and both approaches were credited.
		iii	entropy decreases <b>AND</b> 3 mol O <sub>2</sub> form 2 mol O <sub>3</sub> <b>OR</b> 3O <sub>2</sub> → 2O <sub>3</sub> <b>OR</b> 3 mol gas form 2 mol gas ✓	1	<b>decreases and reason required for mark</b>  For mol, <b>ALLOW</b> molecules <b>ALLOW</b> multiples, e.g. 1½O <sub>2</sub> → O <sub>3</sub> ; O <sub>2</sub> + ½O <sub>2</sub> → O <sub>3</sub> <b>ALLOW</b> O <sub>2</sub> + O → O <sub>3</sub> <b>Note: DO NOT ALLOW</b> 2 mol gas forms 1 mol gas unless linked to O <sub>2</sub> + O → O <sub>3</sub>  <b>IGNORE</b> reaction forms fewer moles / molecules

## 5.2.2 Enthalpy and Entropy

			<p><b>Examiner's Comments</b></p> <p>This part caused more problems as candidates were expected to recognise the different gaseous moles on formation of ozone. Candidates were expected to state the 3:2 ratio from <math>3\text{O}_2(\text{g}) \rightarrow 2\text{O}_3(\text{g})</math> or 2:1 ratio from <math>\text{O}_2 + \text{O} \rightarrow \text{O}_3(\text{g})</math>; the best responses did this, either by quoting the molar ratio or from use of the equation. Vaguer responses such as 'fewer moles' were not credited. Strangely, some candidates gave a 'correct' response for the reverse reaction.</p>
b		<p><b>CARE: responses involve changes of negative values</b></p> <p><b>Feasibility AND <math>\Delta G</math></b>            Reaction becomes / is less feasible / not feasible  <b>AND</b>  <math>\Delta G</math> increases  <b>OR</b> <math>\Delta G</math> becomes / is less negative / more positive  <b>OR</b> <math>\Delta G &gt; 0</math> <b>OR</b> <math>\Delta H - T\Delta S &gt; 0</math>  <b>OR</b> <math>\Delta H - T\Delta S</math> becomes / is less negative / more positive  <b>OR</b> <math>\Delta H &gt; T\Delta S</math> ✓  <b>OR</b> <math>T\Delta S</math> becomes / is more negative than <math>\Delta H</math> ✓</p> <p><b>Effect on <math>T\Delta S</math></b>  <math>T\Delta S</math> becomes more negative <b>OR</b> <math>T\Delta S</math> decreases  <b>OR</b> <math>-T\Delta S</math> becomes more positive <b>OR</b> <math>-T\Delta S</math> increases  <b>OR</b> <b>magnitude</b> of <math>T\Delta S</math> increases  <b>OR</b> <math> T\Delta S </math> increases ✓</p>	<p><b>FULL ANNOTATIONS MUST BE USED</b></p> <p>As alternative for 'less feasible'  <b>ALLOW</b> 'less spontaneous'  <b>OR</b> a comment that implies 'reaction no longer take place'</p> <p><b>ALLOW for <math>\Delta G</math> increases</b>  <math>\Delta G &lt; 0</math> <b>only</b> at low T</p> <p><b>DO NOT ALLOW</b> <math>T\Delta S &gt; \Delta H</math> (<i>comparison wrong way round</i>)</p> <p><b>NOTE: Last statement automatically scores 2nd mark ALSO</b></p> <p><b>IGNORE</b> significance  <b>IGNORE</b> magnitude for 1st marking point</p> <p><b>DO NOT ALLOW</b> <math>T\Delta S</math> increases  <b>IGNORE</b> significance</p> <p><b>APPROACH BASED ON TOTAL ENTROPY: Feasibility with increasing temperature</b>            Reaction becomes less feasible / not feasible  <b>AND</b>  <math>\Delta S - \Delta H / T</math> <b>OR</b> <math>\Delta S_{\text{total}}</math> decreases / less positive ✓</p> <p><b>Effect on <math>\Delta H / T</math></b>  <math>\Delta H / T</math> is less negative <b>OR</b> <math>\Delta H / T</math> increases  <b>OR</b> <math>-\Delta H / T</math> decreases  <b>OR</b> <b>magnitude</b> of <math>\Delta H / T</math> decreases ✓</p> <p><b>Examiner's Comments</b></p> <p>Comparison of negative numbers is a difficult skill, shown by the many contradictions seen in</p>

## 5.2.2 Enthalpy and Entropy

				<p>the candidate responses. The key to success here was to compare the two key terms, <math>\Delta H</math> and <math>T\Delta S</math> and to relate these to feasibility from the sign of <math>\Delta G</math>. Problems arose in responses that ignored the negative signs leading to ambiguous statements. The required '<math>T\Delta S</math> becomes more negative' was often communicated as '<math>T\Delta S</math> increases'. The latter term is ambiguous, its meaning depending on whether the sign is included or omitted. The comparison of <math>T\Delta S</math> with <math>\Delta H</math> caused more problems with many responses seen of <math>T\Delta S &gt; \Delta H</math>. Mathematically, the opposite is true as both values are negative. The better approach was to communicate this relationship in text as '<math>T\Delta S</math> is more negative than <math>\Delta H</math>.' The responses from the best candidates used this precise language but many candidates did not score marks here because of the ambiguity.</p>
c	i	<p><b>FIRST, CHECK THE ANSWER ON ANSWER LINE</b>  <b>IF answer = 75.962 OR 75.96 OR 76.0 OR 76, award 2 marks</b>          .....</p> <p><math>\Delta S = (33 + 3 \times 189) - (76 + 3 \times 131)</math>  <math>= (+)131 \text{ (J K}^{-1} \text{ mol}^{-1}) \checkmark</math></p> <p><math>\Delta G = 115 - (298 \times 0.131)</math>  <math>= (+) 75.962 \text{ OR } 75.96 \text{ OR } 76.0 \text{ OR } 76 \text{ (kJ K}^{-1} \text{ mol}^{-1}) \checkmark</math></p>	2	<p><b>DO NOT ALLOW</b> -131</p> <p><b>ALLOW ECF</b> from incorrect calculated value of <math>\Delta S</math></p> <p><b>Examiner's Comments</b></p> <p>Almost all candidates successfully showed that the entropy change was <math>131 \text{ J K}^{-1} \text{ mol}^{-1}</math>. The majority then went on to use the Gibbs equation to obtain the correct value of <math>\Delta G</math>. It was only the weaker candidates who succumbed to use of 131, rather than 0.131 in the expression, resulting in a negative absolute temperature. Some candidates used <math>25 \text{ }^\circ\text{C}</math> instead of 298 K. Candidates are advised to check that correct provided values had been used: a common transcription error was use of -155 instead of -115 for the <math>\Delta H</math> value.</p> <p>Answer: <math>76.0 \text{ kJ K}^{-1} \text{ mol}^{-1}</math></p>
	ii	<p><b>FIRST, CHECK THE ANSWER ON ANSWER LINE</b>  <b>IF answer = 878 OR 877.9 OR 877.86, award 2 marks</b>          .....</p>	2	<p><b>ALLOW</b> total entropy statement:  <math>\Delta S(\text{total}) = 0 \text{ OR } \Delta S(\text{total}) &gt; 0</math></p>
